

Lower Duwamish Waterway Group

Port of Seattle / City of Seattle / King County / The Boeing Company

MEMORANDUM

To: Allison Hiltner, US Environmental Protection Agency
Ronald Timm, Washington State Department of Ecology

From: Lower Duwamish Waterway Group

Subject: Validated LDW Sediment Data for ENR-AC Pilot

Date: January 15, 2015

Attachments: Data CD (which includes field forms)

INTRODUCTION

This memorandum presents the validated surface and subsurface sediment data for samples collected from the Lower Duwamish Waterway (LDW) to be used in the selection of plot areas for the enhanced natural recovery (ENR)/activated carbon (AC) pilot study (EPA and Ecology 2014). For this effort, samples were collected and analyzed for polychlorinated biphenyls (PCBs) in select areas within the LDW to determine if PCB concentrations were within the targeted range for the study.

This memorandum presents the validated data as well as any deviations from the quality assurance project plan (QAPP) (Windward 2014), which was prepared in accordance with guidance from the US Environmental Protection Agency (EPA) (2002) and Washington State Department of Ecology (Ecology) (2008).

These data will be discussed with EPA and Ecology on January 21, 2015, as part of the final selection process to determine the study areas.

METHODS AND QAPP DEVIATIONS

All methods and procedures outlined in the QAPP (Windward 2014) were followed in the collection and analysis of these samples, with the following exceptions.

Core Acceptance Criteria

Core acceptance criteria include an estimated recovery of greater than 75% for each core (Windward 2014). According to the QAPP, if the sample acceptance criteria are not achieved in the first core, the sample will be set aside and up to two additional core drives will be advanced at locations within 10 m of the proposed location. Following consultation with LDWG and EPA/Ecology, the sediment cores from LDW-PILOT2A (56.2% recovery), LDW-PILOT2B (65.5% recovery) and LDW-PILOT3B (67.6% recovery) were accepted for analysis because recovery was less than 75% after three attempts.

Core Depth

In the subtidal and scour mitigation candidate plot areas, the objective was to collect subsurface sediment samples from the 0-to-2-ft depth interval (Windward 2014). After four attempts at location LDW-PILOT2B, the highest recovery (65.5% recovery) obtained captured sediment only from the 0-to-1.88-ft depth. Following consultation with LDWG and EPA/Ecology, the core sediment from LDW-PILOT2B was accepted for analysis using the 0-to-1.5-ft depth interval.

Sampling Location

In accordance with the QAPP, a global positioning system (GPS) was used to position the sampling vessel such that the GPS-receiver, mounted to the winch arm directly over the grab sampler, was within 1 to 2 m of the intended sampling location (Windward 2014). At the time of sampling, a barge was occupying most of Area 1. The target surface sediment location LDW-PILOT1A-SS2 could not be safely accessed because it was blocked by the barge's anchor line.

In addition, surface sediment location LDW-PILOT3A-SS4 and core sediment locations LDW-PILOT1A-SC1, LDW-PILOT2A-SC1 and LDW-PILOT8A-SC1 were slightly off-target due to drift resulting from wind and current. Surface sediment was collected 9.6 ft (2.9 m) from the target coordinate at LDW-PILOT1A-SS2. EPA oversight was present at the time of sampling and accepted the change of location. Surface sediment was collected 6.9 ft (2.1 m) off-target at location LDW-PILOT3A-SS4; core sediment was collected 6.8 ft (2.1 m) off-target at location LDW-PILOT1A-SC1, 7.0 ft (2.1 m) off-target at location LDW-PILOT2A-SC1, and 7.3 ft (2.2 m) off-target at location LDW-PILOT8A-SC1.

DATA QUALIFIERS

In accordance with the QAPP, the laboratory results were validated by Laboratory Data Consultants, Inc. (LDC) at a summary level (EPA 2A). The following is a summary of the validation findings. When multiple dilutions were analyzed, LDC selected the best technical result from the available dilutions and qualified the lesser technically acceptable results with an "R" (rejected). Of the 80 total organic carbon results, 31 were qualified as estimated (J) due to the percent recovery of the associated matrix spike being outside of the established control limits. Six Aroclor-1248 results were qualified by Analytical Resources, Inc. (ARI) with "Y" indicating a raised reporting limit due to chromatographic interference. LDC qualified those six results as not detected (U) at the level of the raised reporting limit. One Aroclor-1254 result was qualified as estimated (J) because the percent recovery of the associated matrix spike was outside of the established control limits.

RESULTS

Table 1 and Figures 1a-1c present the results of the individual surface sediment samples, including the calculated total PCB values expressed in units of both dry weight basis and organic carbon normalized units. Table 2 and Figures 1a-1c present the same types of results for subsurface sediment samples. Table 3 presents the average total PCB values for surface sediment in the study areas grouped by plot type.

dw – dry weight

ID – identification

J – estimated concentration

OC – organic carbon

nc – not calculated (TOC concentration was outside of the acceptable range of 0.5 to 4.0%)

PCB – polychlorinated biphenyl

TOC – total organic carbon

ww – wet weight

U – not detected at given concentration

Table 3. Surface sediment total PCB concentrations averaged by area

Area	Concentration of Total PCBs ($\mu\text{g}/\text{kg}$ dw)			Concentration of Total PCBs (mg/kg OC)		
	Subarea A	Subarea B	Entire Area	Subarea A	Subarea B	Entire Area
Subtidal Areas subject to potential scour						
1	260	240	250	14	12	13
2	200	230	220	15	13	14
5	na	na	na	na	na	na
Intertidal Areas						
3	150	100	130	7.5	5.7	6.6
8	99	80	89	nc	nc	nc
9	1200	590	880	59	38	49
Subtidal Areas						
4	210	710	460	nc	44	nc
6	620	1,500	1,100	33	110	72
7	240	250	250	11	9.9	10

dw – dry weight

na – not analyzed

nc – not calculated (TOC concentration was outside of the acceptable range of 0.5 to 4.0%)

OC – organic carbon

PCB – polychlorinated biphenyl
