Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

 R – result was rejected

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

 R – result was rejected

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

 R – result was rejected

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

 R – result was rejected

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Totals were calculated for each sediment grain size category using the following grain size ranges: rock – all fractions >2,000 µm; sand – all fractions between 63 and 2,000 µm; silt – all fractions between 3.9 and 63 µm; and clay – all fractions <3.9 µm.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

dw – dry weight

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Note: Results for congeners that co-elute with each other are attributed to the congener with the lowest IUPAC number. For example, PCB-129, PCB-160, and PCB-163 co-elute with each other. The concentration for this trio of congeners is shown with PCB-129. For PCB-160 and PCB-163, C129 is shown rather than a concentration to indicate that these congeners co-elute with PCB-129. A similar convention is used for other co-eluting congeners.

dw – dry weight

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Note: Results for congeners that co-elute with each other are attributed to the congener with the lowest IUPAC number. For example, PCB-129, PCB-160, and PCB-163 co-elute with each other. The concentration for this trio of congeners is shown with PCB-129. For PCB-160 and PCB-163, C129 is shown rather than a concentration to indicate that these congeners co-elute with PCB-129. A similar convention is used for other co-eluting congeners.

Data qualifiers: C – concentration represents coelution

nv – no value; there is neither a CSL nor an ML for this chemical

OC – organic carbon

SQS and CSL – sediment quality standard and cleanup screening level (WAC 173-204)

SL and ML – screening level and maximum level (USACE 2000)

Concentration in *italics* indicates that laboratory replicate was run for sample. Value reported was based on averaging rules in Appendix D.

Concentration in **bold** indicates SQS/SL exceedance.

Concentration in **bold underline** indicates CSL/ML exceedance.

Methods for calculating total benzofluoranthenes, total LPAHs, total HPAHs, total PCBs, total DDTs, and total chlordane are presented in Appendix D.

Data qualifiers: U – not detected at reporting limit shown

 J – estimated concentration

 UJ – not detected at estimated reporting limit shown

^a SQS and CSL are reported, when available on a dry weight basis. For chemicals with no SQS or CSL in dry weight, then LAET and 2LAET values are used. SL and ML values are used for chemicals with no SQS/CSL or LAET/2LAET values (i.e., antimony, nickel, 1,3-dichlorobenzene, hexachloroethane, and pesticides)

LAET and 2LAET – lowest apparent effects threshold and 2nd lowest apparent effects threshold (PTI 1988)

SQS and CSL – sediment quality standard and cleanup screening level (WAC 173-204)

SL and ML – screening level and maximum level (USACE 2000)

dw – dry weight

na – not analyzed

nv – no value; there is no CSL, ML, or 2LAET for this chemical

Concentration in **bold** indicates SQS/SL exceedance.

Concentration in **underline** indicates CSL/ML exceedance.
