SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. Mitchell,

Enclosed is our revised EPA Level II and Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Analytical Resources, Inc. Samples were analyzed for GC/MS Volatiles by EPA SW 846 Methods 8260B, GC/MS Semivolatiles by EPA SW 846 Methods 8270C and 8270C-SIM, GC/MS Butyltins by the Krone Method and EPA SW 846 Method 8270C-SIM, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, GC Pentachlorophenol by EPA SW 846 Method 8041, Metals by EPA SW 846 Methods 6010B/200.8/7471, Total Solids by EPA Method 160.3, Ammonia as Nitrogen by modified EPA Method 350.1, Sulfide by EPA Method 376.2, Grain Size by PSEP Method, and Total Organic Carbon by Plumb Method. Samples are referenced under the following Sample Delivery Groups: HU85, HV37, HV42, HV00, HV38, HV58, HV72, HV76, HW06, HW16, HR49, HZ55 and II22. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

CHEMICAL DATA QUALITY REVIEW FOR PHASE 2 SURFACE SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13234, 13315, 13381, 13384, 13395, 13398, 13403, 13412, 13419, 13521, 13846

This report details the findings of an EPA Level II and Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Analytical Resources, Inc. Samples were analyzed for GC/MS Volatiles by EPA SW 846 Methods 8260B, GC/MS Semivolatiles by EPA SW 846 Methods 8270C and 8270C-SIM, GC/MS Butyltins by the Krone Method and EPA SW 846 Method 8270C-SIM, GC Chlorinated Pesticides by EPA SW 846 Method 8081A, GC Polychlorinated Biphenyls by EPA SW 846 Method 8082, GC Pentachlorophenol by EPA SW 846 Method 8041, Metals by EPA SW 846 Methods 6010B/200.8/7471, Total Solids by EPA Method 160.3, Ammonia as Nitrogen by modified EPA Method 350.1, Sulfide by EPA Method 376.2, Grain Size by PSEP Method, and Total Organic Carbon by Plumb Method. Samples are referenced under the following Sample Delivery Groups: HU85, HV37, HV42, HV00, HV38, HV58, HV72, HV76, HW06, HW16, HR49, HZ55 and II22. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses. Sample IDs ending in "**" underwent Level IV review.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999) and the National Functional Guidelines for Inorganic Data Review (July 2002). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Instrument Calibration
- Blanks
- Surrogates
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards
- Laboratory Control Samples
- Target Compound Identifications (Not reviewed for Level II)
- Compound Quantitation and CRQLs (Not reviewed for Level II)
- System Performance
- Field Duplicates

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

J+ The result is an estimated quantity, but the result may be biased high.

J- The result is an estimated quantity, but the result may be biased low.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

I. Method Compliance

Antimony, arsenic and thallium were analyzed using EPA Method 200.8 instead of EPA SW 846 Method 6020 as required by the QAPP.

II. Usability

Technical holding time exceedance, instrument calibration, method blank contamination, compound identification, compound quantitation and various QC exceedance problems have warranted the qualification of a portion of the data set.

Low LCS and MS/MSD recoveries have warranted the qualification of detected results as estimated (J) and non-detected results as unusable (R) for butyltin trichloride in the butyltin analyses in SDGs HV42, HU85, HV00, HV37, HV58 and HW06.

Technical holding time problems have warranted the qualification of non-detected results as rejected (R) in the volatile analyses in SDGs HZ55 and II22. The detected results were qualified as estimated (J-) for sulfide and the total solids for one sample in SDG HW06 and for several samples in the total solids analyses in SDG HR49.

Instrument calibration problems have warranted the qualification of detected results as estimated (J) and non-detected results as estimated (UJ) for several compounds in the semivolatile and semivolatile-SIM analyses for SDGs HV42 and HV76.

Method blank contamination have warranted the qualification of bis(2-ethylhexyl)phthalate, di-n-butylphthalate and diethylphthalate as non-detected (U) for several samples in the semivolatile and semivolatile-SIM analyses for SDGs HV00, HV37, HV38 and HV58.

Compound identification problems have warranted the qualification of the detected result for hexachlorobenzene as presumptive and estimated (NJ) in the pesticide analysis for SDG II22.

Compound quantitation problems have warranted the qualification of detected results as estimated (J) for several compounds in the pesticide analysis for SDG HU85 and in the PCB analyses for SDGs HV00, HW06 and HS56.

Various QC accuracy and precision exceedances have warranted the qualification of detected results as estimated (J, J-) and non-detected results as estimated (UJ) in the semivolatile, semivolatile-SIM, pesticide, PCB, sulfide, metals and butyltin analyses for SDGs HU85, HV00, HV37, HV38, HV42, HV58, HV72, HV76, HW06, HW16 and HR49 and volatile analysis for SDG II22.

The required frequency of SRM was not met for the sulfide analyses.

No action was taken when the SRM results were outside the limit of Mean ± Standard Deviation for the organic analyses since the SRM standards were outdated and there were no certified QC limits established.

III. Additional Review

The calibration and internal standard summary forms and the ICP interference check sample analysis data that were associated to all the Level II samples were evaluated per client request. Instrument calibration and internal standard recovery problems did not warrant the qualification of the associated data as unusable (R).

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Sample results that were found to be rejected (R) are unusable for all purposes. Based upon the data validation all other results are considered valid and usable for all purposes.

GC/MS Volatiles by EPA SW 846 Method 8260B

I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Associated SDG	Sample	Compound	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
HZ55	LDW-SS3-010 LDW-SS3-010RE	All TCL compounds	55	14	J (all detects) R (all non-detects)	P
II22	LDW-SSB4a-010 LDW-SSB4a-010RE	All TCL compounds	135	14	J (all detects) R (all non-detects)	P

Non-detected sample concentrations were qualified as unusable (R) due to a gross exceedance (>2X) of holding time.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Percent relative standard deviations (%RSD) were less than or equal to 15.0% for each individual compound and less than or equal to 30.0% for calibration check compounds (CCCs).

In the case where %RSD was greater than 15.0%, the laboratory used a calibration curve to evaluate the compound. All coefficients of determination (r^2) were greater than or equal to 0.990 .

For the purposes of technical evaluation, all compounds were evaluated against the 30.0% (%RSD) National Functional Guideline criteria. Unless noted above, all compounds were within the validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

Percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were within the method criteria of less than or equal to 20.0% for calibration check compounds (CCCs).

For the purposes of technical evaluation, all compounds were evaluated against the 25.0% (%D) National Functional Guideline criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
II22	LDW-SSB4a-010MS/MSD (LDW-SSB4a-010 LDW-SSB4a-010RE)	1,2,4-Trichlorobenzene	40.6 (75-125)	46.7 (75-125)	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

The required frequency of SRM analysis was not met for all the compounds. However, SRM analysis was performed for these compounds in the semivolatile analyses.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

System performance data were not reviewed for Level II.

XV. Overall Assessment

Overall, the data cannot be used for their intended purpose.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

GC/MS Semivolatiles by EPA SW 846 Method 8270C

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals with the following exceptions:

Associated SDG	Sample	Compound	Total Time From DFTPP Tuning Until Analysis	Required Analysis Time From DFTPP Tuning Until Analysis
HV42	LDW-SS47-010**	All TCL compounds	12 hours 8 minutes	12 hours

All ion abundance requirements were met.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds. with the following exceptions:

Associated SDG	Date	Compound	%RSD	Associated Samples	Flag	A or P
HV42 HV76	3/2/05	4,6-Dinitro-2-methylphenol	32.11128	LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS6-010DL** LDW-SS47-010** LDW-SS47-010DL** LDW-SS108-010** LDW-SS61-010** LDW-SS25-010** LDW-SS86-010** LDW-SS98-010** LDW-SS141-010** LDW-SSB9a-010** LDW-SS156-010** LDW-SS155-010** LDW-SS154-010** LDW-SS153-010** LDW-SS152-010** LDW-SS151-010** LDW-SS144-010**	J (all detects) UJ (all non-detects)	A

A curve fit, based on the initial calibration, was established for quantitation. The coefficient of determination (r^2) was greater than or equal to 0.990 .

Average relative response factors (RRF) for all target compounds and system monitoring compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% with the following exceptions:

Associated SDG	Date	Compound	%D	Associated Samples	Flag	A or P
HV42	3/24/05	Hexachlorocyclopentadiene 2,4-Dinitrophenol	52.92375 27.16432	LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS47-010**	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV42	3/25/05	Hexachlorocyclopentadiene 2,4-Dinitrophenol	39.09301 40.86125	LDW-SS6-010DL** LDW-SS47-010DL** LDW-SS108-010**	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV42	3/28/05	Nitrobenzene Hexachlorocyclopentadiene 2,4-Dinitrophenol 4-Nitrophenol	33.13655 53.69960 52.60003 36.32453	LDW-SS61-010** LDW-SS25-010** LDW-SS86-010**	J (all detects) UJ (all non-detects)	A
HV76	3/29/05	Hexachlorocyclopentadiene 2,4-Dinitrophenol	35.86451 31.91413	LDW-SS98-010** LDW-SS141-010** LDW-SSB9a-010** LDW-SS156-010** LDW-SS155-010** LDW-SS154-010** LDW-SS153-010** LDW-SS152-010** LDW-SS151-010** LDW-SS144-010**	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

Initial calibration verification (ICV) percent recoveries (%R) were within the 75-125% QC limits with the following exceptions:

Associated SDG	Date	Standard	Compound	%R	Associated Samples	Flag	A or P
HV42	3/2/05	ICV0302	4,6-Dinitro-2-methylphenol	131.45	LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS6-010DL** LDW-SS47-010** LDW-SS47-010DL** LDW-SS108-010** LDW-SS61-010** LDW-SS25-010** LDW-SS86-010**	J (all detects) UJ (all non-detects)	A

All of the continuing calibration RRF values were within validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No semivolatile contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
HV00 HV38	MB-031705	3/17/05	Di-n-butylphthalate Bis(2-ethylhexyl)phthalate	29 ug/Kg 21 ug/Kg	LDW-SS81-010 LDW-SS65-010 LDW-SS41-010 LDW-SS30-010 LDW-SS19-010 LDW-SS11-010 LDW-SS105-010 LDW-SS106-010 LDW-SS122-010 LDW-SS131-010 LDW-SS206-010 LDW-SS140-010 LDW-SS39-010 LDW-SS100-010 LDW-SSB2b-010
HV37	MB-031805	3/18/05	Diethylphthalate Bis(2-ethylhexyl)phthalate	40 ug/Kg 58 ug/Kg	LDW-SS7-010 LDW-SS3-010 LDW-SS95-010 LDW-SS95-010DL LDW-SS133-010 LDW-SS138-010 LDW-SS139-010 LDW-SS137-010 LDW-SS132-010 LDW-SS66-010 LDW-SS62-010 LDW-SS207-010 LDW-SS146-010 LDW-SS147-010 LDW-SS148-010 LDW-SS149-010 LDW-SS150-010

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
HV37	LDW-SS95-010	Nitrobenzene-d5 Terphenyl-d14 Phenol-d5 2,4,6-Tribromophenol 2-Fluorobiphenyl 1,2-Dichlorobenzene-d4 2-Fluorophenol 2-Chlorophenol-d4	21.3 (40-130) 22.0 (40-130) 20.7 (40-130) 22.9 (40-130) 20.4 (40-130) 15.8 (40-130) 19.8 (40-130) 19.7 (40-130)	All TCL compounds	J (all detects) UJ (all non-detects)	A

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HU85	LDW-SS74-010MS/MSD (LDW-SS74-010)	Phenol	-	35.2 (40-130)	-	J (all detects) UJ (all non-detects)	A
HV58	LDW-SS145-010MS/MSD (LDW-SS145-010)	Benzo(g,h,i)perylene	32.6 (40-130)	32.8 (40-130)	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material was performed at the required frequencies.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits with the following exceptions:

Associated SDG	Sample	Internal Standards	Area (Limits)	Compound	Flag	A or P
HV42	LDW-SS6-010**	Perylene-d12	162046 (194084-776338)	Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Dibenz(a,h)anthracene Benzo(g,h,i)perylene	J (all detects) UJ (all non-detects)	A
HV42	LDW-SS47-010**	Perylene-d12	169310 (194084-776338)	Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Dibenz(a,h)anthracene Benzo(g,h,i)perylene	J (all detects) UJ (all non-detects)	A

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
HV37	LDW-SS95-010	Phenanthrene Anthracene Fluoranthene Pyrene Chrysene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
HV37	LDW-SS95-010RE	Phenanthrene Fluoranthene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects)	A
HV58	LDW-SS24-010	Fluoranthene Pyrene Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects)	A
HV58	LDW-SS9-010	Fluoranthene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A
HW06	LDW-SS35-010	Phenanthrene Fluoranthene Pyrene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
HV37	LDW-SS95-010	Naphthalene 2-Methylnaphthalene Acenaphthylene Acenaphthene Dibenzofuran Fluorene Phenanthrene Carbazole Anthracene Fluoranthene Pyrene Benzo(a)anthracene Bis(2-ethylhexyl)phthalate Chrysene Benzo(b)fluoranthene Benzo(k)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene Benzo(g,h,i)perylene	R R R R R R R R R R R R R R R R R R R	A

For sample LDW-SS35-010DL, several compounds were considered most usable. The area count of the associated internal standard was outside the QC limits in sample LDW-SS35-010.

XVI. Field Duplicates

Samples LDW-SS19-010 and LDW-SS205-010 and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00), samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85), samples LDW-SS62-010 and LDW-SS207-010 (SDG HV37) were identified as field duplicates. No semivolatiles were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)

		LDW-SS62-010	LDW-SS207-010	
HV37	Chrysene	440	530	19 (≤50)
HV37	Benzo(b)fluoranthene	390	390	0 (≤50)
HV37	Benzo(k)fluoranthene	380	500	27 (≤50)
HV37	Benzo(a)pyrene	290	330	13 (≤50)
HV37	Indeno(1,2,3-cd)pyrene	110	120	9 (≤50)
HV37	Benzo(g,h,i)perylene	82	97	17 (≤50)

XVII. Field Blanks

Samples LDW-SS103-RB (SDG HU85), LDW-SS7-RB (SDG HV37), and samples LDW-SSB7a-RB and LDW-SS71-RB (SDG HV58) were identified as rinsate blanks. No semivolatile contaminants were found in these blanks.

GC/MS Semivolatiles by EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM).

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for all compounds with the following exceptions:

Associated SDG	Date	Compound	%RSD	Associated Samples	Flag	A or P
HV42	1/29/05	Benzoic acid	39.2	LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS47-010** LDW-SS108-010** LDW-SS61-010** LDW-SS25-010** LDW-SS86-010**	J (all detects) UJ (all non-detects)	A
HV76	1/29/05	Benzoic acid	39.231	LDW-SS98-010** LDW-SS141-010** LDW-SSB9a-010** LDW-SS156-010** LDW-SS155-010** LDW-SS154-010** LDW-SS153-010** LDW-SS152-010** LDW-SS151-010** LDW-SS144-010**	J (all detects) UJ (all non-detects)	A

Average relative response factors (RRF) for all target compounds and system monitoring compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0% with the following exceptions:

Associated SDG	Date	Compound	%D	Associated Samples	Flag	A or P
HV42 HV76	3/28/05	Benzoic acid N-Nitrosodimethylamine	31.7 28.0	LDW-SS6-010** LDW-SSB9a-010** LDW-SS156-010** LDW-SS155-010** LDW-SS154-010** LDW-SS153-010**	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV42 HV76	3/30/05	Benzoic acid N-Nitrosodimethylamine	42.1 34.0	LDW-SS61-010RE** LDW-SS152-010**	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV76	3/29/05	N-Nitrosodimethylamine	30.8	LDW-SS151-010** LDW-SS144-010**	J (all detects) UJ (all non-detects)	A

All of the continuing calibration RRF values were within validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polynuclear aromatic hydrocarbon contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
HV42	MB-033005	3/30/05	Diethylphthalate	9.3 ug/Kg	LDW-SS6-010RE**

Associated SDG	Method Blank ID	Extraction Date	Compound TIC (RT in minutes)	Concentration	Associated Samples
HV76 HW06	MB-032205	3/22/05	Diethylphthalate	8.0 ug/Kg	LDW-SS98-010** LDW-SS141-010** LDW-SSB9a-010** LDW-SS156-010** LDW-SS155-010** LDW-SS154-010** LDW-SS153-010** LDW-SS152-010** LDW-SS151-010** LDW-SS144-010** LDW-SS71-010 LDW-SS2-010 LDW-SS2-010DL LDW-SS69b-010 LDW-SS158-010 LDW-SS159-010 LDW-SS157-010 LDW-SS35-010 LDW-SS35-010DL

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>10X for common contaminants, >5X for other contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Compound TIC (RT in minutes)	Reported Concentration	Modified Final Concentration
HV42	LDW-SS6-010RE**	Diethylphthalate	7.2 ug/Kg	7.2U ug/Kg
HV76	LDW-SS98-010**	Diethylphthalate	14 ug/Kg	14U ug/Kg
HV76	LDW-SS141-010**	Diethylphthalate	9.7 ug/Kg	9.7U ug/Kg
HV76	LDW-SS156-010**	Diethylphthalate	11 ug/Kg	11U ug/Kg
HV76	LDW-SS152-010**	Diethylphthalate	8.4 ug/Kg	8.4U ug/Kg
HV76	LDW-SS151-010**	Diethylphthalate	11 ug/Kg	11U ug/Kg
HV76	LDW-SS144-010**	Diethylphthalate	7.3 ug/Kg	7.3U ug/Kg
HW06	LDW-SS71-010	Diethylphthalate	6.5 ug/Kg	6.5U ug/Kg
HW06	LDW-SS157-010	Diethylphthalate	7.7 ug/Kg	7.7U ug/Kg

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Surrogate	%R (Limits)	Compound	Flag	A or P
HV00	LDW-SS106-010	1,2-Dichlorobenzene-d4 Nitrobenzene-d5	34.8 (40-130) 36.4 (40-130)	Benzo(a)anthracene Benzo(b)fluoranthene Indeno(1,2,3-cd)pyrene 1,4-Dichlorobenzene 1,2,4-Trichlorobenzene Hexachlorobenzene Hexachlorobutadiene Dimethylphthalate Diethylphthalate Butylbenzylphthalate N-Nitrosodiphenylamine Benzyl alcohol 1,2-Dichlorobenzene N-Nitroso-di-propylamine N-Nitrosodimethylamine	J (all detects) UJ (all non-detects)	P
HV42	LDW-SS61-010**	2-Fluorobiphenyl 2-Fluorophenol 1,2-Dichlorobenzene-d4 2,4,6-Tribromophenol Phenol-d5 2-Chlorophenol-d4 Nitrobenzene-d5 Terphenyl-d14	31.6 (40-130) 28.5 (40-130) 22.4 (40-130) 35.2 (40-130) 28.8 (40-130) 28.5 (40-130) 26.8 (40-130) 35.2 (40-130)	All TCL compounds	J (all detects) UJ (all non-detects)	A
HV76	LDW-SS155-010**	Phenol-d5 2-Fluorophenol	34.7 (40-130) 37.9 (40-130)	Benzoic acid 2-Methylphenol 2,4-Dimethylphenol Pentachlorophenol	J (all detects) UJ (all non-detects)	P

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HV58	LDW-SS145-010MS/MSD (LDW-SS145-010)	Pentachlorophenol	-	39.2 (40-130)	-	J (all detects) UJ (all non-detects)	A
HV42	LDW-SS86-010MS/MSD (LDW-SS86-010**)	N-Nitroso-di-n-propylamine	34.7 (40-130)	-	-	J (all detects) UJ (all non-detects)	A

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HV76	LDW-SS151-010MS/MSD (LDW-SS151-010**)	N-Nitroso-di-n-propylamine	31.2 (40-130)	-	-	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material was performed at the required frequencies.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
HW06	LDW-SS2-010	Benzo(b)fluoranthene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A
HW06	LDW-SS35-010	Benzo(a)anthracene Benzo(b)fluoranthene Benzo(a)pyrene Indeno(1.2.3-cd)pyrene	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects) J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds were not reported by the laboratory for Level IV.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
HV58	LDW-SS24-010	Benzo(b)fluoranthene	R	A
HV58	LDW-SS24-010DL	All TCL compounds except Benzo(b)fluoranthene	R	A
HV42	LDW-SS61-010**	All TCL compounds	R	A
HW06	LDW-SS2-010	Benzo(a)anthracene Benzo(b)fluoranthene	R R	A
HW06	LDW-SS2-010DL	All TCL compounds except Benzo(a)anthracene Benzo(b)fluoranthene	R	A
HW06	LDW-SS35-010	Benzo(a)anthracene Benzo(b)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene	R R R R	A
HW06	LDW-SS35-010DL	All TCL compounds except Benzo(a)anthracene Benzo(b)fluoranthene Benzo(a)pyrene Indeno(1,2,3-cd)pyrene	R	A

*Indicates change as the result of report review.

XVI. Field Duplicates

Samples LDW-SS19-010 and LDW-SS205-010 and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00), samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85), and samples LDW-SS62-010 and LDW-SS207-010 (SDG HV37) were identified as field duplicates. No semivolatiles were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS19-010	LDW-SS205-010	
HV00	Benzo(a)anthracene	170	150	13 (≤50)
HV00	Benzo(b)fluoranthene	170	260	42 (≤50)
HV00	Benzo(a)pyrene	130	190	38 (≤50)
HV00	Indeno(1,2,3-cd)pyrene	78	110	34 (≤50)
HV00	Butylbenzylphthalate	9.9	32	105 (≤50)
HV00	1,2-Dichlorobenzene	6.6	6.6U	Not calculable

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS131-010	LDW-SS206-010	
HV00	Benzo(a)anthracene	56	42	29 (≤50)
HV00	Benzo(b)fluoranthene	71	47	41 (≤50)
HV00	Benzo(a)pyrene	62	37	51 (≤50)
HV00	Indeno(1,2,3-cd)pyrene	47	28	51 (≤50)
HV00	Benzoic acid	90	130	36 (≤50)
HV00	Dimethylphthalate	21	14	40 (≤50)
HV00	Butylbenzylphthalate	21	46	75 (≤50)

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS82-010	LDW-SS204-010	
HU85	Benzo(a)anthracene	56	29	22 (≤50)
HU85	Benzo(b)fluoranthene	54	32	51 (≤50)
HU85	Benzo(a)pyrene	34	21	47 (≤50)
HU85	Indeno(1,2,3-cd)pyrene	24	14	53 (≤50)

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS62-010	LDW-SS207-010	
HV37	Benzo(a)anthracene	22	32	37 (≤50)
HV37	Benzo(b)fluoranthene	25	43	53 (≤50)
HV37	Benzo(a)pyrene	20	29	37 (≤50)
HV37	Indeno(1,2,3-cd)pyrene	14	20	35 (≤50)

XVII. Field Blanks

No field blanks were identified in this SDG.

GC Chlorinated Pesticides by EPA SW 846 Method 8081A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

Retention times (RT) of all compounds in the calibration standards were within QC limits.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HW16	LDW-SSB7a-010MS/MSD (LDW-SSB7a-010)	Hexachlorobenzene	330 (50-150)	-	130 (≤50)	J (all detects) UJ (all non-detects)	A

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
HU85	LCS-031405	Endrin aldehyde	33.8 (50-150)	LDW-SS85-010 LDW-SS73-010 LDW-SS82-010 LDW-SS74-010 LDW-SS204-010	J (all detects) UJ (all non-detects)	P
HV37 HV00	LCS-031605	Endrin aldehyde	36.8 (50-150)	LDW-SS133-010 LDW-SS150-010 LDW-SS81-010 LDW-SS41-010 LDW-SS131-010 LDW-SS206-010 LDW-SS140-010	J (all detects) UJ (all non-detects)	P
HV42 HV38	LCS-032105	Endrin aldehyde	27.8 (50-150)	LDW-SS108-010** LDW-SS25-010** LDW-SSB2b-010	J (all detects) UJ (all non-detects)	P
HV58 HW06 HW16	LCS-032205	Endrin aldehyde	19.5 (50-150)	LDW-SS9-010 LDW-SS59-010 LDW-SSB5b-010 LDW-SS2-010 LDW-SS69b-010 LDW-SSB7a-010	J (all detects) UJ (all non-detects)	P

Associated SDG	LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
HV72 HV76	LCS-032105	Endrin aldehyde	24.2 (50-150)	LDW-SS93-010 LDW-SSB6a-010 LDW-SSB9a-010** LDW-SS155-010** LDW-SS152-010** LDW-SS144-010**	J (all detects) UJ (all non-detects)	P

Standard reference material was performed at the required frequencies.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, GPC cleanup was performed.

XI. Target Compound Identification

All target compound identifications were within validation criteria for samples on which EPA Level IV review was performed.

Due to the presence of numerous interfering peaks in the sample and since GC/MS confirmation was not performed, the data was qualified as noted below due to potential false positives:

Associated SDG	Sample	Compound	Flag	A or P
II22	LDW-SSB4a-010	Hexachlorobenzene	NJ (all detects)	A

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria for samples on which EPA Level IV review was performed.

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	RPD	Flag	A or P
HU85	LDW-SS85-010	alpha-Chlordane	61	J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Overall Assessment of Data

The overall assessment of data was acceptable.

XIV. Field Duplicates

Samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85) and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00) were identified as field duplicates. No chlorinated pesticides were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS131-010	LDW-SS206-010	
HV00	Hexachlorobenzene	0.98U	1.6	Not calculable

XV. Field Blanks

No field blanks were identified in this SDG.

Polychlorinated Biphenyls by EPA SW 846 Method 8082

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance was acceptable unless noted otherwise under initial calibration and continuing calibration sections.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration of multicomponent compounds was performed for the primary (quantitation) column as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

IV. Continuing Calibration

Continuing calibration was performed at required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

The percent difference (%D) of the second source calibration standard were less than or equal to 15.0% for all compounds.

Retention times (RT) of all compounds in the calibration standards were within QC limits.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Sample	Column	Surrogate	%R (Limits)	Compound	Flag	A or P
HR49	UB-SS8-010	Not specified	Tetrachloro-m-xylene	35.2 (50-150)	All TCL compounds	J (all detects) UJ (all non-detects)	P

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material was performed at the required frequencies.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Although florisil cleanup was not required by the method, it was performed by the laboratory for EPA Level IV.

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

Although GPC cleanup was not required by the method, GPC cleanup was performed by the laboratory for EPA Level IV.

Although sulfuric acid cleanup was not required by the method, sulfuric acid cleanup was performed by the laboratory for EPA Level IV.

GPC cleanup data were not reviewed for Level II.

XI. Target Compound Identification

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
HU85 HV37 HW06	LDW-SS85-010 LDW-SS148-010 LDW-SS35-010	Aroclor-1254	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A
HV42	LDW-SS6-010**	Aroclor-1248 Aroclor-1254 Aroclor-1260	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects) J (all detects)	A
HV38	LDW-SSB2b-010	Aroclor-1242 Aroclor-1254	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects)	A
HW06	LDW-SS71-010	Aroclor-1242	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects)	A

The sample results for detected compounds from the two columns were within 40.0% relative percent differences (RPD) with the following exceptions:

Associated SDG	Sample	Compound	RPD	Flag	A or P
HV00	LDW-SS11-010	Aroclor-1260	43	J (all detects)	A
HW06	LDW-SS71-010 LDW-SS158-010	Aroclor-1242	42	J (all detects)	A
HS56	SC-SS1b-010	Aroclor-1248 Aroclor-1260	41 48	J (all detects) J (all detects)	A

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
HU85	LDW-SS85-010	Aroclor-1254 Aroclor-1260	R R	A
HU85	LDW-SS85-010DL	All TCL compounds except Aroclor-1254 Aroclor-1260	R	A
HV37	LDW-SS148-010	Aroclor-1254	R	A
HV37	LDW-SS148-010DL	All TCL compounds except Aroclor-1254	R	A
HV42	LDW-SS6-010**	Aroclor-1248 Aroclor-1254 Aroclor-1260	R R R	A
HV42	LDW-SS6-010DL**	All TCL compounds except Aroclor-1248 Aroclor-1254 Aroclor-1260	R	A

HV38 HW06	LDW-SSB2b-010DL LDW-SS35-010DL	All TCL compounds Aroclor-1242 Aroclor-1254	R	A
HW06	LDW-SS71-010	Aroclor-1242 Aroclor-1254 Aroclor-1260	R R R	A
HW06	LDW-SS71-010DL	All TCL compounds except Aroclor-1242 Aroclor-1254 Aroclor-1260	R	A

*Indicates change as the result of report review.

XIV. Field Duplicates

Samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85), samples LDW-SS62-010 and LDW-SS207-010 (SDG HV37), and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00) were identified as field duplicates. No polychlorinated biphenyls were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS82-010	LDW-SS204-010	
HU85	Aroclor-1248	62	60	3 (≤50)
HU85	Aroclor-1254	72	84	15 (≤50)
HU85	Aroclor-1260	59	62	5 (≤50)

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS62-010	LDW-SS207-010	
HV37	Aroclor-1248	82	76	8 (≤50)
HV37	Aroclor-1254	140	130	7 (≤50)
HV37	Aroclor-1260	120	110	9 (≤50)

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS131-010	LDW-SS206-010	
HV00	Aroclor-1254	21	23	9 (≤50)

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS19-010	LDW-SS205-010	
HV00	Aroclor-1242	52	34	42 (≤50)
HV00	Aroclor-1254	110	86	24 (≤50)
HV00	Aroclor-1260	95	63	40 (≤50)

XV. Field Blanks

Samples LDW-SS103-RB (SDG HU85) and LDW-SS7-RB (SDG HV37), and samples LDW-SSB7a-RB and LDW-SS71-RB (SDG HV58) were identified as rinsate blanks. No polychlorinated biphenyl contaminants were found in these blanks.

Metals by EPA SW 846 Methods 6010B/200.8/7000

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

An initial calibration was performed.

The frequency and analysis criteria of the initial calibration verification (ICV) and continuing calibration verification (CCV) were met.

III. Blanks

Method blanks were reviewed for each matrix as applicable.

Data qualification by the initial, continuing and preparation blanks (ICB/CCB/PBs) was based on the maximum contaminant concentration in the ICB/CCB/PBs in the analysis of each analyte. No contaminant concentrations were found in the initial, continuing and preparation blanks with the following exceptions:

Associated SDG	Method Blank ID	Analyte	Maximum Concentration	Associated Samples
HV58	PB (prep blank)	Zinc	0.9 mg/Kg	LDW-SS24-010 LDW-SS9-010 LDW-SS77-010 LDW-SS59-010 LDW-SSB5b-010 LDW-SS53-010 LDW-SS34-010 LDW-SSB4a-010 LDW-SS29-010 LDW-SS107-010 LDW-SS145-010

Sample concentrations were compared to the maximum contaminant concentrations detected in the ICB/CCB/PBs. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

IV. ICP Interference Check Sample (ICS) Analysis

The frequency of analysis was met.

The criteria for analysis were met with the following exceptions:

Associated SDG	ICS ID	Analyte	Concentration	Reporting Limit	Associated Samples	Flag	A or P
HV42	ICSA	Selenium	-52.8 ug/L	50 ug/L	LDW-SS6-010**	UJ (all non-detects)	P
HV76	ICSA	Molybdenum	5.7 ug/L	5.0 ug/L	LDW-SS152-010** LDW-SS151-010**	J (all detects)	P
HV76	ICSA	Selenium	-57.2 ug/L	50.0 ug/L	LDW-SS152-010** LDW-SS151-010**	UJ (all non-detects)	P

Samples were qualified as estimated (J) if the interferent concentrations in the samples were greater than ninety percent of the spiked interferent concentrations in the ICSA.

*V. Matrix Spike Analysis

Matrix spike (MS) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
HU85	LDW-SS85-010MS (LDW-SS85-010 LDW-SS73-010 LDW-SS78-010 LDW-SS82-010 LDW-SS74-010 LDW-SS204-010 LDW-SS91-010 LDW-SS103-010 LDW-SS68-010 LDW-SS8-010)	Antimony	6.1 (70-130)	J (all detects) UJ (all non-detects)	A

Associated SDG	Spike ID (Associated Samples)	Analyte	%R (Limits)	Flag	A or P
HW06	LDW-SS71-010MS (LDW-SS71-010 LDW-SS2-010 LDW-SS69b-010 LDW-SS158-010 LDW-SS159-010 LDW-SS157-010 LDW-SS35-010)	Mercury	37.5 (55-137)	J- (all detects) UJ (all non-detects)	A
HW16	LDW-SSB7a-010MS (LDW-SSB7a-010)	Antimony	4.6 (70-130)	J (all detects) UJ (all non-detects)	A

*Although antimony percent recoveries were severely low (<30%), all the results in the associated samples were qualified as estimated (J/UJ) since the post spike recoveries for antimony were greater than 75%.

*Added above text.

VI. Duplicate Sample Analysis

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
HV58	LDW-SS90-010DUPRE (LDW-SS90-010)	Lead Zinc	65.7 (≤30) 34.1 (≤30)	- -	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV58	LDW-SS90-010DUP (LDW-SS24-010 LDW-SS9-010 LDW-SS77-010 LDW-SS59-010 LDW-SS5b-010 LDW-SS53-010 LDW-SS34-010 LDW-SSB4a-010 LDW-SS29-010 LDW-SS107-010 LDW-SS145-010)	Arsenic Lead Nickel Zinc	74.4 (≤30) 52.6 (≤30) - 132 (≤30)	- - 9 mg/Kg (≤8 mg/Kg) -	J (all detects) UJ (all non-detects)	A

Associated SDG	DUP ID (Associated Samples)	Analyte	RPD (Limits)	Difference (Limits)	Flag	A or P
HW06	LDW-SS71-010DUP (LDW-SS71-010 LDW-SS2-010 LDW-SS69b-010 LDW-SS158-010 LDW-SS159-010 LDW-SS157-010 LDW-SS35-010)	Copper Mercury	44.8 (≤30) -	- 0.32 mg/Kg (≤0.12)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material was performed at the required frequencies.

VIII. Internal Standards (ICP-MS)

All internal standard areas and retention times were within QC limits.

IX. Furnace Atomic Absorption QC

Graphite furnace atomic absorption was not utilized.

X. ICP Serial Dilution

ICP serial dilution was not performed by the laboratory.

XI. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

Laboratory reported antimony, arsenic, and thallium by EPA SW 846 Method 200.8 instead of EPA SW 846 Method 6020 as required by the method.

XII. Overall Assessment of Data

The overall assessment of data was acceptable.

XIII. Field Duplicates

Samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85), samples LDW-SS62-010 and LDW-SS207-010 (SDG HV37), samples LDW-SS19-010 and LDW-SS205-010, and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00) were identified as field duplicates. No metals were detected in any of the samples with the following exceptions:

Associated SDG	Analyte	Concentration (mg/Kg)		RPD (Limits)
		LDW-SS82-010	LDW-SS204-010	
HU85	Arsenic	9.4	8.6	9 (≤50)
HU85	Cadmium	0.4U	0.4	Not calculable
HU85	Chromium	27	27.7	3 (≤50)

XIV. Field Blanks

Samples LDW-SS103-RB (SDG HU85), LDW-SS7-RB (SDG HV37), and samples LDW-SSB7a-RB and LDW-SS71-RB (SDG HV58) were identified as rinsate blanks. No metal contaminants were found in these blanks.

Total Solids by EPA Method 160.3, Ammonia as Nitrogen by modified EPA Method 350.1, Sulfide by EPA Method 376.2, Grain Size by PSEP Method, & Total Organic Carbon by Plumb Method

I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Associated SDG	Sample	Analyte	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
HW06	LDW-SS35-010	Total solids Sulfide	10	7	J- (all detects) R (all non-detects) J- (all detects) R (all non-detects)	P
HV72	LDW-SSMSMP43B-010	Sulfide	8	7	J- (all detects) UJ (all non-detects)	P
HR49	SC-SS1a-010 LW-SS3-010 LU-S9b-010 LW-SS6-010	Total solids	13	7	J- (all detects) R (all non-detects)	P
HR49	EB-SS2a-010 DRD-SS7-010 UB-SS8-010 EB-SS2b-010	Total solids	12	7	J- (all detects) R (all non-detects)	P
HR49	SB-SS6-010 LU-SS9a-010	Total solids	14	7	J- (all detects) R (all non-detects)	P

Since the results above were detected in the affected samples in SDGs HW06 and HR49, these findings did not warrant rejection (R) of the data.

Since the holding time was not grossly exceeded for sample LDW-SSMSMP43B-010 (SDG HV72), the results were qualified as estimated.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

All criteria for the initial calibration of each method were met.

b. Calibration Verification

Calibration verification frequency and analysis criteria were met for each method when applicable.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No contaminant concentrations were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Analyte	Concentration	Associated Samples
HU85	MB	Ammonia as N	0.16 mg/Kg	LDW-SS85-010 LDW-SS78-010 LDW-SS82-010 LDW-SS204-010 LDW-SS68-010
HV00	MB	Ammonia as N	0.24 mg/Kg	LDW-SS81-010 LDW-SS65-010 LDW-SS30-010 LDW-SS16-010 LDW-SS131-010 LDW-SS206-010

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

IV. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HV37	LDW-SS207-010MS/MSD (LDW-SS7-010 LDW-SS3-010 LDW-SS95-010 LDW-SS133-010 LDW-SS138-010 LDW-SS139-010 LDW-SS137-010 LDW-SS132-010 LDW-SS66-010 LDW-SS62-010 LDW-SS207-010 LDW-SS146-010 LDW-SS147-010 LDW-SS148-010 LDW-SS149-010 LDW-SS150-010)	Sulfide	61.9 (75-125)	63.1 (75-125)	-	J- (all detects) UJ (all non-detects)	A
HV42	LDW-SS86-010MS/MSD (LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS47-010** LDW-SS108-010** LDW-SS61-010** LDW-SS25-010** LDW-SS86-010**)	Sulfide	-	73.5 (75-125)	-	J- (all detects) UJ (all non-detects)	A
HV00	LDW-SS122-010MS/MSD (LDW-SS81-010 LDW-SS65-010 LDW-SS41-010 LDW-SS30-010 LDW-SS21-010 LDW-SS19-010 LDW-SS205-010 LDW-SS11-010 LDW-SS16-010 LDW-SS105-010 LDW-SS106-010 LDW-SS122-010 LDW-SS131-010 LDW-SS206-010 LDW-SS140-010)	Sulfide	57.8 (75-125)	55.2 (75-125)	-	J- (all detects) UJ (all non-detects)	A
HV42 HV38	LDW-SS86-010MS/MSD (LDW-SS45-010** LDW-SS46-010** LDW-SS6-010** LDW-SS47-010** LDW-SS108-010** LDW-SS61-010** LDW-SS25-010** LDW-SS86-010** LDW-SS39-010 LDW-SS100-010 LDW-SSB2b-010)	Sulfide	-	73.5 (75-125)	-	J- (all detects) UJ (all non-detects)	A

Associated SDG	Spike ID (Associated Samples)	Analyte	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HW06 HW16	LDW-SS157-010MS/MSD (LDW-SS2-010 LDW-SS69b-010 LDW-SS158-010 LDW-SS159-010 LDW-SS157-010 LDW-SSB7a-010)	Sulfide	50.6 (75-125)	63.5 (75-125)	-	J- (all detects) UJ (all non-detects)	A

V. Duplicates/Triplicates

Duplicate (DUP) and triplicate (TRP) sample analyses were reviewed for each matrix as applicable. Relative percent differences (RPD) and relative standard deviation (RSD) were within QC limits.

VI. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material was performed for all analyses except sulfide.

VII. Sample Result Verification

All sample result verifications met validation criteria.

Sample result verification data were not reviewed for Level II.

VIII. Overall Assessment of Data

The overall assessment of data was acceptable.

IX. Field Duplicates

Samples LDW-SS82-010 and LDW-SS204-010 (SDG HU85), samples LDW-SS62-010 and LDW-SS207-010 (SDG HV37), samples LDW-SS19-010 and LDW-SS205-010, and samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00) were identified as field duplicates. No contaminant concentrations were detected in any of the samples with the following exceptions:

Associated SDG	Analyte	Concentration		RPD (Limits)
		LDW-SS82-010	LDW-SS204-010	
HU85	Total solids	51.40 %	51.60 %	0 (≤50)

*Indicates change as the result of report review.

X. Field Blanks

No field blanks were identified in this SDG.

GC/MS Butyltins By Krone Method & EPA SW 846 Method 8270C using Selected Ion Monitoring (SIM).

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at 12 hour intervals. All ion abundance requirements were met.

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration was performed using required standard concentrations.

Percent relative standard deviations (%RSD) were less than or equal to 30.0% for butyltin.

Average relative response factors (RRF) for butyltin were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

The continuing calibration percent differences (%D) between the initial calibration RRF and the continuing calibration RRF were less than or equal to 25.0%.

The percent differences (%D) of the second source calibration standard were less than or equal to 25.0% for butyltin.

All of the continuing calibration RRF values were within validation criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No butyltin contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	Spike ID (Associated Samples)	Compound	MS (%R) (Limits)	MSD (%R) (Limits)	RPD (Limits)	Flag	A or P
HV00	LDW-SS41-010MS/MSD (LDW-SS41-010)	Tributyltin chloride	-	704 (20-130)	134 (≤50)	J (all detects) UJ (all non-detects)	A
HV42	LDW-SS47-010MS/MSD (LDW-SS47-010**)	Tributyltin chloride Dibutyltin dichloride	- -	- 285 (20-130)	107 (≤50) 58.2 (≤50)	J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects)	A
HV42	LDW-SS47-010MS/MSD (LDW-SS47-010**)	Butyltin trichloride	8.0 (20-130)	-	-	J (all detects) R (all non-detects)	A
HU85	LDW-SS74-010MS/MSD (LDW-SS74-010)	Butyltin trichloride	10.2 (20-130)	9.6 (20-130)	-	J (all detects) R (all non-detects)	A
HU85	LDW-SS74-010MS/MSD (LDW-SS74-010)	Dibutyltin dichloride	19.4 (20-130)	17.8 (20-130)	-	J (all detects) UJ (all non-detects)	A
HV58	LDW-SS34-010MS/MSD (LDW-SS34-010)	Butyltin trichloride	18.1 (20-130)	-	52.4 (≤50)	J (all detects) UJ (all non-detects)	A

Percent recoveries (%R) were not within QC limits for tributyltin chloride in the LDW-SS74-010MS/MSD in SDG HU85 and dibutyltin dichloride and tributyltin chloride in the LDW-SS47-010MS/MSD in SDG HV42. Since the sample concentrations were greater than the spiked concentrations or there were no associated samples, no data were qualified.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
HU85	LCS-031405	Butyltin trichloride	4.6 (20-130)	LDW-SS78-010 LDW-SS74-010 LDW-SS8-010	J (all detects) R (all non-detects)	P

Associated SDG	LCS ID	Compound	%R (Limits)	Associated Samples	Flag	A or P
HV00 HV37	LCS-031605	Butyltin trichloride	6.2 (20-130)	LDW-SS41-010 LDW-SS16-010 LDW-SS131-010 LDW-SS206-010 LDW-SS7-010 LDW-SS3-010 LDW-SS133-010	J (all detects) R (all non-detects)	P
HV42 HV72	LCS-031905	Butyltin trichloride	10.0 (20-130)	LDW-SS45-010** LDW-SS46-010** LDW-SS46-010DL** LDW-SS6-010** LDW-SS47-010** LDW-SS108-010** LDW-SS124-010	J (all detects) UJ (all non-detects)	P
HV58 HW06	LCS-032205	Butyltin trichloride	6.6 (20-130)	LDW-SS53-010 LDW-SS34-010 LDW-SS107-010 LDW-SS2-010	J (all detects) R (all non-detects)	P

Standard reference material was performed at the required frequencies.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

All internal standard areas and retention times were within QC limits.

XI. Target Compound Identifications

All target compound identifications were within validation criteria.

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Criteria	Flag	A or P
HV42	LDW-SS46-010**	Tributyltin chloride Dibutyltin dichloride	Sample result exceeded calibration range.	Reported result should be within calibration range.	J (all detects) J (all detects)	A

*Indicates change as the result of report review.

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

All tentatively identified compounds were within validation criteria.

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

The system performance was acceptable.

System performance data were not reviewed for Level II.

XV. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
HV42	LDW-SS46-010**	Tributyltin chloride Dibutyltin dichloride	R	A
HV42	LDW-SS46-010DL**	Butyltin trichloride	R	A

XVI. Field Duplicates

Samples LDW-SS131-010 and LDW-SS206-010 (SDG HV00) were identified as field duplicates. No butyltins were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ug/Kg)		RPD (Limits)
		LDW-SS131-010	LDW-SS206-010	
HV00	Tributyltin chloride	4.2U	59	Not calculable
HV00	Dibutyltin dichloride	5.8U	6.5	Not calculable

XVII. Field Blanks

No field blanks were identified in this SDG.

GC Pentachlorophenol By EPA SW 846 Method 8041

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. Calibration

a. Initial Calibration

Initial calibration of compounds was performed for the primary (quantitation) column and confirmation column as required by this method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for all compounds.

Retention time windows were evaluated and considered technically acceptable.

b. Calibration Verification

Calibration verification was performed at the required frequencies.

The percent differences (%D) of calibration factors in continuing standard mixtures were within the 15.0% QC limits.

Retention times (RT) of all compounds in the calibration standards were within QC limits.

III. Blanks

Method blanks were reviewed for each matrix as applicable. No pentachlorophenol contaminants were found in the method blanks.

IV. Accuracy and Precision Data

a. Surrogate Recovery

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

b. Matrix Spike/(Matrix Spike) Duplicate

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

c. Laboratory Control Samples

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

The required frequency of SRM analysis was not met for pentachlorophenol. However, SRM analysis was performed for pentachlorophenol in the semivolatile analyses.

V. Target Compound Identification

All target compound identifications were within validation criteria.

VI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

VII. System Performance

The system performance was acceptable.

VIII. Overall Assessment of Data

The overall assessment of data was acceptable.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Field Blanks

No field blanks were identified in this SDG.

CIRCLED RESULTS WERE NOT QUALIFIED. ALL RESULTS NOT CIRCLED WERE QUALIFIED BY THE FOLLOWING STATEMENT:
Common contaminants such as the phthalates and TICs noted above that were detected in samples within ten times the associated method blank concentration were qualified as not detected, "U". Other contaminants within five times the method blank concentration were also qualified as not detected, "U".

VALIDATION FINDINGS CHECKLIST

Reviewer: Q
2nd Reviewer: VC

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓	✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓	✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			

LDC #: 13381C29
SDG #: HV42

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: K

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓	✓		
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XVII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (25 std)	Recalculated RRF (25 std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = $(A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Average RRF (Initial)	Reported RRF (CC)	Recalculated RRF (CC)	Reported %D	Recalculated %D

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, S:

$$\text{Conc.} = \frac{(56910)(20)(500)(3)(\quad)}{(627107)(1.17037)(41.8)(1)(0.614)}$$

$= 90.64\ \mu g/g$

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?	✓			
Did the initial calibration meet the curve fit acceptance criteria?	✓			
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓	✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?		✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓

Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (25 std)	Recalculated RRF (25 std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD

2nd reviewer: 4

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 2, 11:

$$\text{Conc.} = \frac{(16756)(20)(500)(3)(\quad)}{(341537)(1.2617)(52.5)(1)(0.483)}$$

$$= 45.91 \text{ ug/g}$$

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?		✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?		✓		
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?	✓			
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓

Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1 std)	Recalculated RRF (1 std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1, 111:

$$\text{Conc.} = \frac{(186238)(2)(500)(1)(\quad)}{(54719)(1.06)(16)(1)(0.474)}$$

Page: 1 of 3
Reviewer: 9
2nd Reviewer: M

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?		✓		
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?	✓			
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?		✓		
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Surrogate spikes				
Were all surrogate %R within QC limits?		✓		
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			

Validation Area	Yes	No	NA	Findings/Comments
XVI. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XVII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (1 std)	Recalculated RRF (1 std)	Reported Average RRF (Initial)	Recalculated Average RRF (Initial)	Reported %RSD	Recalculated %RSD

$$\text{Concentration} = \frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

V_i = Volume of extract injected in microliters (ul)

V_t = Volume of the concentrated extract in microliters (ul)

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

2.0 = Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 1, 11:

Conc. = $\frac{(13034)(2)(500)(1)(\quad)}{(56349)(1.061)(13.1)(1)(0.592)}$

= 28.11 MS/KG

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?	✓			
Were endrin and 4,4'-DDT breakdowns ≤ 15%.0 for individual breakdown in the Evaluation mix standards?	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recovieries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?	✓			
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓

Reviewer: [illegible]
2nd Reviewer: [illegible]

METHOD: GC ✓ HPLC ____

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (0.02std)	Recalculated CF (0.02std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

METHOD: GC / HPLC

The percent difference (%D) of the initial calibration average Calibration Factors (CF) and the continuing calibration CF were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. CF - CF)/ave. CF
CF = A/C

Where: ave. CF = initial calibration average CF
CF = continuing calibration CF
A = Area of compound
C = Concentration of compound

#	Standard ID	Calibration Date	Compound	Average CF(Ical)/ CCV Conc.	Reported CF/Conc. CCV	Recalculated CF/Conc. CCV	Reported %D	Recalculated %D
1	INDAC14	3/22/05	endosulfan I	0.020	0.021	0.021	5.0	5.0

Page: 1 of 2
Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: Pesticides/PCBs (EPA SW 846 Method 8081/8082)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/ECD Instrument performance check				
Was the instrument performance found to be acceptable?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
Were the required standard concentrations analyzed in the initial calibration?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Were Evaluation mix standards analyzed prior to the initial calibration and sample analysis?	✓			
Were endrin and 4,4'-DDT breakdowns ≤ 15%.0 for individual breakdown in the Evaluation mix standards?	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recovieries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Were extract cleanup blanks analyzed with every batch requiring clean-up?	✓			
Was there contamination in the method blanks or clean-up blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓

VALIDATION FINDINGS CHECKLIST

Reviewer: BJ
2nd Reviewer: DL

Validation Area	Yes	No	NA	Findings/Comments
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?		✓		
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Target compound identification				
Were the retention times of reported detects within the RT windows?			✓	
XI. Compound quantitation/CRQLs				
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions, dry weight factors, and clean-up activities applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.				
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: GC / HPLC

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (0.0^2std)	Recalculated CF (0.0^2std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

Method: ✓ GC _____ HPLC

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or ____%R	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recoveries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓

VALIDATION FINDINGS CHECKLIST

Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: ✓ GC _____ HPLC

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were the RT windows properly established?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or %R	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recoveries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓

Initial Calibration Calculation Verification

Reviewer: [illegible]
2nd Reviewer: [illegible]

METHOD: GC ✓ HPLC ____

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (0.25 std)	Recalculated CF (0.25 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

2nd Reviewer: x

Method: Metals (EPA SW 846 Method 6010/7000/6020) 4

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.				
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?				
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?			✓

SDG #: 14V4

VALIDATION FINDINGS CHECKLIST

Page: 1 of 1
Reviewer: MR
2nd Reviewer: M

Validation Area	Yes	No	NA	Findings/Comments
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%?			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?		✓		
Were all percent differences (%Ds) ≤ 10%?			✓	
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.			✓	
VIII. Internal Standards (EPA SW 846 Method ~~6020~~) 200.8				
Were all the percent recoveries (%R) within the ~~30-120~~% of the intensity of the internal standard in the associated initial calibration? %s 60-125				
If the %Rs were outside the criteria, was a reanalysis performed?				
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

VALIDATION FINDINGS WORKSHEET
Initial and Continuing Calibration Calculation Verification

Reviewer: MW
2nd Reviewer: K

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

$\%R = \frac{Found}{True} \times 100$ Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
ICV	ICP (Initial calibration)	Cd	1014	1000	101.4	101.4	Y
↓	~~GFAA~~ (Initial calibration) ICP/MS	Tl	49.05	50	98.1	98.1	↓
↓	CVAA (Initial calibration)	Hg	8.36	8.0	104.5	104.5	↓
CCV	ICP (Continuing calibration)	Zn	961.6	1000	96.2	96.2	↓
↓	GFAA (Continuing calibration)	Sb	50.865	50	101.7	101.7	↓
↓	CVAA (Continuing calibration)	Hg	3.56	4.0	89	89.0	↓
	Cyanide (Initial calibration)						
	Cyanide (Continuing calibation)						

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

LDC #: 13381C4
SDG #: 14442

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MM
2nd Reviewer: DR

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$$\%R = \frac{Found}{True} \times 100$$

Where, Fcund = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$$RPD = \frac{|S-D|}{(S+D)/2} \times 100$$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$$\%D = \frac{|I-SDR|}{I} \times 100$$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
ICSAB	ICP interference check	V	976.4	1000	97.6	97.6	Y
LCS	Laboratory control sample	Mo	49.8	50	99.6	99.6	
9	Matrix spike	Ag	(SSR-SR) 110	110	1.00	1.00	
10	Duplicate	As	26.3	26.1	0.8	0.8	
MA	ICP serial diluton						

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Have results been reported and calculated correctly?
(Y) N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
(Y) N N/A Are all detection limits below the CRDL?

Detected analyte results for 1 were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$Co = \frac{0.05011\ mg/L \times 0.05L \times 2 \times 1000\ g/kg}{1.002g \times 0.453} = 11.4\ mg/kg$

Sample ID	Analyte	Reported Concentration (mg/kg)	Calculated Concentration (mg/kg)	Acceptable (Y/N)

VALIDATION FINDINGS WORKSHEET
Matrix Spike Analysis

Reviewer: MY
2nd Reviewer: [illegible]

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y N N/A Were matrix spike percent recoveries (%R) within the control limits of 75-125? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

(Y) N N/A Was a post digestion spike analyzed for ICP elements that did not meet the required criteria for matrix spike recovery?

LEVEL IV ONLY:

Y N (N/A) Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

#	Matrix Spike ID	Matrix	Analyte	%R	Associated Samples	Qualifications
1	16	Sediment	Sb	1.6 (70-130)	A1	J/UJ/A (post spike = 99.0)

Method: Metals (EPA SW 826 Method 6010/7000/6020)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% (80-120% for mercury and 85-115% for cyanide) QC limits?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Was a midrange cyanide standard distilled?			✓	
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. ICP Interference Check Sample				
Were ICP interference check samples performed daily?	✓			
Were the AB solution percent recoveries (%R) with the 80-120% QC limits?	✓			
IV. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.		✓		
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of +/- RL(+/-2X RL for soil) was used for samples that were ≤ 5X the RL, including when only one of the duplicate sample values were ≤ 5X the RL.	✓			
V. Laboratory control samples				
Was an LCS anaylzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% QC limits for water samples and laboratory established QC limits for soils?	✓			
VI. Furnace Atomic Absorption QC				
If MSA was performed, was the correlation coefficients ≥ 0.995?			✓	
Do all applicable analysies have duplicate injections?			✓	

LDC #: 13412A4
SDG #: HV96

VALIDATION FINDINGS CHECKLIST

Reviewer: MM
2nd Reviewer: M

Validation Area	Yes	No	NA	Findings/Comments
For sample concentrations > RL, are applicable duplicate injection RSD values < 20%?			✓	
Were analytical spike recoveries within the 85-115% QC limits?			✓	
VII. ICP Serial Dilution				
Was an ICP serial dilution analyzed if analyte concentrations were > 50X the IDL?	✓			
Were all percent differences (%Ds) ≤ 10%?	✓			
Was there evidence of negative interference? If yes, professional judgement will be used to qualify the data.			✓	
VIII. Internal Standards (EPA SW 846 Method ~~6020~~ 6020A)				
Were all the percent recoveries (%R) within the ~~30-120%~~ 60-140% of the intensity of the internal standard in the associated initial calibration?	✓			
If the %Rs were outside the criteria, was a reanalysis performed?			✓	
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Sample Result Verification				
Were RLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XI. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XII. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target analytes were detected in the field duplicates.			✓	
XIII. Field blanks				
Field blanks were identified in this SDG.		✓		
Target analytes were detected in the field blanks.			✓

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

An initial and continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration (in ug/L) of each analyte measured in the analysis of the ICV or CCV solution
True = concentration (in ug/L) of each analyte in the ICV or CCV source

Standard ID	Type of Analysis	Element	Found (ug/L)	True (ug/L)	Recalculated %R	Reported %R	Acceptable (Y/N)
ICV	ICP (Intial calibration)	Cr	940.5	1000	94.0	94.0	Y
↓	~~GFAA~~ (Initial calibration) ICP/MS	Sb	50.98	50.0	101.9	101.9	
	CVAA (Initial calibration)	Hg	8.07	8.0	100.9	100.9	
CCV	ICP (Continuing calibration)	Mo	1008	1000	100.1	100.1	
	~~GFAA~~ (Continuing calibration) ICP/MS	Tl	53.5	50	107.0	107.0	
↓	CVAA (Continuing calibration)	Hg	4.02	4.0	100.5	100.5	↓
	Cyanide (Initial calibration)						
	Cyanide (Continuing calibation)						

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

SDG #: HV76

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MM
2nd Reviewer: DC

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Percent recoveries (%R) for an ICP interference check sample, a laboratory control sample and a matrix spike sample were recaluculated using the following formula:

$\%R = \frac{Found}{True} \times 100$

Where, Found = Concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = Concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$

Where, S = Original sample concentration
D = Duplicate sample concentration

An ICP serial dilution percent difference (%D) was recalculated using the following formula:

$\%D = \frac{|I-SDR|}{I} \times 100$

Where, I = Initial Sample Result (mg/L)
SDR = Serial Dilution Result (mg/L) (Instrument Reading x 5)

Sample ID	Type of Analysis	Element	Found / S / I (units)	True / D / SDR (units)	Recalculated %R / RPD / %D	Reported %R / RPD / %D	Acceptable (Y/N)
ICSAB	ICP interferance check	Be	989.4	1000	98.9	98.9	Y
LCS	Laboratory control sample	Cu	47.4	50	94.8	94.8	
1	Matrix spike	Ag	(SSR-SR) 88.96	92.1	96.6	96.5	
12	Duplicate	V	53.5	52.6	1.7	1.7	
1 MS	ICP serial dilution	Zn	351.1	353.9	0.8	0.8	

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

VALIDATION FINDINGS WORKSHEET
Sample Calculation Verification

Reviewer: MV
2nd reviewer: R

METHOD: Trace Metals (EPA SW 846 Method 6010/7000)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Have results been reported and calculated correctly?
Y N N/A Are results within the calibrated range of the instruments and within the linear range of the ICP?
Y N N/A Are all detection limits below the CRDL?

Detected analyte results for 1 were recalculated and verified using the following equation:

Concentration = $\frac{(RD)(FV)(Dil)}{(In.\ Vol.)(\%S)}$

RD = Raw data concentration
FV = Final volume (ml)
In. Vol. = Initial volume (ml) or weight (G)
Dil = Dilution factor
%S = Decimal percent solids

Recalculation:

$As = \frac{5.457\ ug/L \times 0.05\ L \times 20}{0.541 \times 1.042\ g} = 9.68\ ug/g$

$= 9.68\ mg/kg$

Sample ID	Analyte	Reported Concentration (~~mg/kg~~)	Calculated Concentration (~~mg/kg~~)	Acceptable (Y/N)
1	As	9.7	9.7	Y
	Cr	19.4	19.4	
	Co	6.1	6.1	
	Cu	33.6	33.6	
	Pb	15	15	
	Mo	1.2	1.2	
	Ni	13	13	
	V	52.6	52.6	
	Zn	65	65	↓

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Reviewer: MH
2nd Reviewer: AC

METHOD: Inorganics, Method see cover

Percent recoveries (%R) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

%R = Found / True x 100 Where, Found = concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

RPD = |S-D| / (S+D)/2 x 100 Where, S = Original sample concentration
D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found / S (units)	True / D (units)	Recalculated %R / RPD	Reported %R / RPD	Acceptable (Y/N)
LCS	Laboratory control sample	S	0.774	0.82	94.4	94.4	Y
9	Matrix spike sample	TOC	(SSR-SR) 3.24	~~6.05~~ 3.36 MH	96.4	96.5	↓
10	Duplicate sample	NH_3-N	12.9	13.1	1.5	2.3	↓

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

METHOD: Inorganics, Method See cover

The correlation coefficient (r) for the calibration of NH_3-N was recalculated. Calibration date: 3/15/05

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

$$\%R = \frac{\text{Found}}{\text{True}} \times 100$$

Where, Found = concentration of each analyte measured in the analysis of the ICV or CCV solution
True = concentration of each analyte in the ICV or CCV source

Type of Analysis	Analyte		conc. (mg/L) (units)	Abs (units)	Recalculated r or %R	Reported r or %R	Acceptable (Y/N)
Initial calibration	NH_3-N	Blank	0	0.1572	r=0.999985	r=0.99999	Y

VALIDATION FINDINGS CHECKLIST

Reviewer: MH
2nd Reviewer: [illegible]

Method: Inorganics (EPA Method See cover)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Calibration				
Were all instruments calibrated daily, each set-up time?	✓			
Were the proper number of standards used?	✓			
Were all initial calibration correlation coefficients ≥ 0.995?	✓			
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?	✓			
Were titrant checks performed as required?			✓	
Were balance checks performed as required?			✓	
Were all initial and continuing calibration verification %Rs within the 90-110% QC limits?	✓			
III. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
IV. Matrix spike/Matrix spike duplicates and Duplicates				
Were a matrix spike (MS) and duplicate (DUP) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD or MS/DUP. Soil / Water.	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the 75-125 QC limits? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.	✓			
Were the MS/MSD or duplicate relative percent differences (RPD) ≤ 20% for waters and ≤ 35% for soil samples? A control limit of ≤ CRDL(≤ 2X CRDL for soil) was used for samples that were ≤ 5X the CRDL, including when only one of the duplicate sample values were ≤ 5X the CRDL.	✓			
V. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the 80-120% (85-115% for Method 300.0) QC limits?	✓			
VI. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓

Reviewer: MH
2nd Reviewer: [illegible]

METHOD: Inorganics, Method See cover

The correlation coefficient (r) for the calibration of S was recalculated. Calibration date: 3/22/05

An initial or continuing calibration verification percent recovery (%R) was recalculated for each type of analysis using the following formula:

%R = Found x 100 / True

Where, Found = concentration of each analyte measured in the analysis of the ICV or CCV solution
True = concentration of each analyte in the ICV or CCV source

Type of Analysis	Analyte		conc. (mg/L) (units)	Area (units)	Recalculated r or %R	Reported r or %R	Acceptable (Y/N)
Initial calibration	S	Blank	0	0	r^2 = 0.9999	r = 0.9999	Y
Calibration verification		Standard 1	0.05	0.032			
		Standard 2	0.124	0.079			
		Standard 3	0.249	0.150			
		Standard 4	0.498	0.298			
		Standard 5	0.995	0.594			
		Standard 6					
		Standard 7					
Calibration verification CCV	0.5	0.5 ~~0.5112~~ MH	0.5112		102.2	102.2	Y
Calibration verification CCV	TOC	0.5	0.5415		108.3	108.3	J
Calibration verification CCV	S	0.958	0.800		106	105	J

Comments: Refer to Calibration Verification findings worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

SDG #: HV76

VALIDATION FINDINGS WORKSHEET
Level IV Recalculation Worksheet

Page: 1 of 1
Reviewer: MM
2nd Reviewer: AC

METHOD: Inorganics, Method See cover

Percent recoveries (%R) for a laboratory control sample and a matrix spike sample were recalculated using the following formula:

$\%R = \frac{Found}{True} \times 100$ Where, Found = concentration of each analyte measured in the analysis of the sample. For the matrix spike calculation, Found = SSR (spiked sample result) - SR (sample result).
True = concentration of each analyte in the source.

A sample and duplicate relative percent difference (RPD) was recalculated using the following formula:

$RPD = \frac{|S-D|}{(S+D)/2} \times 100$ Where, S = Original sample concentration
D = Duplicate sample concentration

Sample ID	Type of Analysis	Element	Found / S (units)	True / D (units)	Recalculated %R / RPD	Reported %R / RPD	Acceptable (Y/N)
LCS	Laboratory control sample	Tl	0.499	0.500	99.8	99.8	Y
13	Matrix spike sample	S	(SSR-SR) 393	335	117.3 ~~119.5~~ 117	116.4	
1, 16	Duplicate sample	TS	53.7 53.6	536	RSD 0.1	RSD 0.1	

Comments: Refer to appropriate worksheet for list of qualifications and associated samples when reported results do not agree within 10.0% of the recalculated results.

VALIDATION FINDINGS WORKSHEET
Matrix Spike/Matrix Spike Duplicates

Reviewer: MH
2nd Reviewer:

METHOD: Inorganics, EPA Method See com

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

(Y) N N/A Was a matrix spike analyzed for each matrix in this SDG?

Y (N) N/A Were matrix spike percent recoveries (%R) within the control limits of (75-125)? If the sample concentration exceeded the spike concentration by a factor of 4 or more, no action was taken.

(Y) N N/A Were all duplicate sample relative percent differences (RPD) ≤ 20% for water samples and ≤35% for soil samples?

LEVEL IV ONLY:

Y N (N/A) Were recalculated results acceptable? See Level IV Recalculation Worksheet for recalculations.

VALIDATION FINDINGS CHECKLIST

Page: 1 of 3
Reviewer: 9
2nd Reviewer: K

Method: Semivolatiles (EPA SW 846 Method 8270C)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS instrument performance check				
Were the DFTPP performance results reviewed and found to be within the specified criteria?	✓			
Were all samples analyzed within the 12 hour clock criteria?	✓			
III. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Were all percent relative standard deviations (%RSD) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?			✓	
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓		
Did the initial calibration meet the curve fit acceptance criteria?			✓	
Were all percent relative standard deviations (%RSD) $\leq$ 30% and relative response factors (RRF) $\geq$ 0.05?	✓			
IV. Continuing calibration				
Was a continuing calibration standard analyzed at least once every 12 hours for each instrument?	✓			
Were all percent differences (%D) and relative response factors (RRF) within method criteria for all CCCs and SPCCs?			✓	
Were all percent differences (%D) $\leq$ 25% and relative response factors (RRF) $\geq$ 0.05?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within QC limits?	✓			
If 2 or more base neutral or acid surrogates were outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			

LDC #: 13381C19
SDG #: HV42

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: AC

Validation Area	Yes	No	NA	Findings/Comments
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?		✓		
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Internal standards				
Were internal standard area counts within -50% or +100% of the associated calibration standard?	✓			
Were retention times within ± 30 seconds from the associated calibration standard?	✓			
XI. Target compound identification				
Were relative retention times (RRT's) within ± 0.06 RRT units of the standard?	✓			
Did compound spectra meet specified EPA "Functional Guidelines" criteria?	✓			
Were chromatogram peaks verified and accounted for?	✓			
XII. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XIII. Tentatively identified compounds (TICs)				
Were the major ions (> 10 percent relative intensity) in the reference spectrum evaluated in sample spectrum?			✓	
Were relative intensities of the major ions within ± 20% between the sample and the reference spectra?			✓	
Did the raw data indicate that the laboratory performed a library search for all required peaks in the chromatograms (samples and blanks)?		✓		
XIV. System performance				
System performance was found to be acceptable.	✓			
XV. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓

Initial Calibration Calculation Verification

Reviewer: 9
2nd Reviewer: ac

METHOD: GC/MS BNA (EPA SW 846 Method 8270)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
$\%RSD = 100 * (S/X)$

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported RRF (| std)	Recalculated RRF (| std)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported %RSD	Recalculated %RSD
1	ICAL	1/18/05	~~Phenol~~ (1st internal standard) TBT	0.561	0.561	0.558	0.558	6.1	6.1
			Naphthalene (2nd internal standard)

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(V_t)(DF)(2.0)}{(A_{is})(RRF)(V_o)(V_i)(\%S)}$

A_x	=	Area of the characteristic ion (EICP) for the compound to be measured
A_{is}	=	Area of the characteristic ion (EICP) for the specific internal standard
I_s	=	Amount of internal standard added in nanograms (ng)
V_o	=	Volume or weight of sample extract in milliliters (ml) or grams (g).
V_i	=	Volume of extract injected in microliters (ul)
V_t	=	Volume of the concentrated extract in microliters (ul)
Df	=	Dilution Factor.
%S	=	Percent solids, applicable to soil and solid matrices only.
2.0	=	Factor of 2 to account for GPC cleanup

Example:

Sample I.D. 4, TBT:

Conc. = $\frac{(8396)(2)(500)(1)(\quad)}{(118091)(0.558)(8.01)(\text{@}1)(0.629)}$

= 25.29 µg/kg

TBT as chloride = 21.9 µg/kg
TBT as ion = 19.5 µg/kg

VALIDATION FINDINGS CHECKLIST

Reviewer: B
2nd Reviewer: [illegible]

Method: ✓ GC _____ HPLC

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. Initial calibration				
Did the laboratory perform a 5 point calibration prior to sample analysis?	✓			
Was a linear fit used for evaluation? If yes, were all percent relative standard deviations (%RSD) ≤ 20%?	✓			
Was a curve fit used for evaluation? If Yes, what was the acceptance criteria used?		✓	✓	
Did the initial calibration meet the curve fit acceptance criteria?				
Were the RT windows properly established?	✓			
IV. Continuing calibration				
What type of continuing calibration calculation was performed? ____%D or %R	✓			
Was a continuing calibration analyzed daily?	✓			
Were all percent differences (%D) ≤ 15%.0 or percent recoveries 85-115%?	✓			
Were all the retention times within the acceptance windows?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank analyzed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.		✓		
VI. Surrogate spikes				
Were all surrogate %R within the QC limits?	✓			
If the percent recovery (%R) of one or more surrogates was outside QC limits, was a reanalysis performed to confirm %R?			✓	
If any %R was less than 10 percent, was a reanalysis performed to confirm %R?			✓	
VII. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.	✓			
Was a MS/MSD analyzed every 20 samples of each matrix?	✓			
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?	✓			
VIII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			

LDC #: 13234D33
SDG #: HP49

Validation Area	Yes	No	NA	Findings/Comments
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
IX. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?			✓	
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
X. Target compound identification				
Were the retention times of reported detects within the RT windows?			✓	
XI. Compound quantitation/CRQLs				
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Were field duplicate pairs identified in this SDG?		✓		
Were target compounds idetected in the field duplicates?			✓	
XV. Field blanks				
Were field blanks identified in this SDG?		✓		
Were target compounds detected in the field blanks?			✓

METHOD: GC ✓ HPLC ____

The calibration Factor (CF), average CF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

CF = A/C
average CF = sum of the CF/number of standards
%RSD = 100 * (S/X)

A = Area of compound,
C = Concentration of compound,
S = Standard deviation of the CF
X = Mean of the CFs

#	Standard ID	Calibration Date	Compound	Reported CF (0.0125 std)	Recalculated CF (0.0125 std)	Reported Average CF (initial)	Recalculated Average CF (initial)	Reported %RSD	Recalculated %RSD

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level II data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Analytical Resources, Inc. GC/MS Volatiles by EPA SW 846 Method 8260B and GC Chlorinated Pesticides by EPA SW 846 Method 8081A. Samples are referenced under the following Sample Delivery Group: HZ55. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

ADDENDUM TO THE
CHEMICAL DATA QUALITY REVIEW FOR PHASE 2 SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13521

This report details the findings of an EPA Level II data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Analytical Resources, Inc. GC/MS Volatiles by EPA SW 846 Method 8260B and GC Chlorinated Pesticides by EPA SW 846 Method 8081A. Samples are referenced under the following Sample Delivery Group: HZ55. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the National Functional Guidelines for Organic Data Review (October 1999). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Blanks
- Surrogates
- Matrix Spike/Matrix Spike Duplicates
- Laboratory Control Samples
- System Performance
- Field Duplicates

Note: X = Validation was performed.

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Holding time exceedances have warranted warranted the qualification of non-detected results as rejected (R) in the volatile analysis.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be rejected (R) are unusable for all purposes. Based upon the data validation all other results are considered valid and usable for all purposes.

GC/MS Volatiles by EPA SW 846 Method 8260B

I. Technical Holding Times

All technical holding time requirements were met with the following exceptions:

Associated SDG	Sample	Compound	Total Days From Sample Collection Until Analysis	Required Holding Time (in Days) From Sample Collection Until Analysis	Flag	A or P
HA55	LDW-SS3-010 LDW-SS3-010RE LDW-SS3-010MS LDW-SS3-010MSD	All TCL compounds	55	14	J (all detects) R (all non-detects)	P

Non-detected sample concentrations were qualified as unusable (R) due to a gross exceedance (>2X) of holding time.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No volatile contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

Standard reference material was not performed in this SDG.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Internal Standards

Internal standards data were not reviewed for Level II.

XI. Target Compound Identifications

Target compound identifications data were not reviewed for Level II.

XII. Compound Quantitation and CRQLs

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Tentatively Identified Compounds (TICs)

Tentatively identified compounds data were not reviewed for Level II.

XIV. System Performance

System performance data were not reviewed for Level II.

XV. Overall Assessment

Overall, the data cannot be used for their intended purpose.

XVI. Field Duplicates

No field duplicates were identified in this SDG.

XVII. Field Blanks

No field blanks were identified in this SDG.

GC Chlorinated Pesticides by EPA SW 846 Method 8081A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/ECD Instrument Performance Check

Instrument performance check data were not reviewed for Level II.

III. Initial Calibration

Initial calibration data were not reviewed for Level II.

IV. Continuing Calibration

Continuing calibration data were not reviewed for Level II.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No chlorinated pesticide contaminants were found in the method blanks.

VI. Surrogate Spikes

Surrogates were added to all samples and blanks as required by the method. All surrogate recoveries (%R) were within QC limits.

VII. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) samples were reviewed for each matrix as applicable. Percent recoveries (%R) and relative percent differences (RPD) were within QC limits.

VIII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. Percent recoveries (%R) were within QC limits.

Standard reference material was not performed in this SDG.

IX. Regional Quality Assurance and Quality Control

Not applicable.

X. Pesticide Cleanup Checks

a. Florisil Cartridge Check

Florisil cartridge check data were not reviewed for Level II.

b. GPC Calibration

GPC cleanup data were not reviewed for Level II.

XI. Target Compound Identification

Target compound identification data were not reviewed for Level II.

XII. Compound Quantitation and Reported CRQLs

Compound quantitation and CRQLs data were not reviewed for Level II.

XIII. Overall Assessment of Data

The overall assessment of data was acceptable.

XIV. Field Duplicates

No field duplicates were identified in this SDG.

XV. Field Blanks

No field blanks were identified in this SDG.

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Axys Analytical Services, Ltd. Samples were analyzed for HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A. Samples are referenced under the following Sample Delivery Groups: DPWG16148 and DPGW16165. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella Cuenco

Stella S. Cuenco
Project Manager/Senior Chemist

CHEMICAL DATA QUALITY REVIEW FOR PHASE 1 AND PHASE 2 SURFACE SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13668

This report details the findings of an EPA Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Axys Analytical Services, Ltd. Samples were analyzed for HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A. Samples are referenced under the following Sample Delivery Groups: DPWG16148 and DPGW16165. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the EPA Region 10 SOP for the Validation of 1668 Toxic, Dioxin-like PCB Data (Revision 1.0, December 8, 1995). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Blanks
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards
- Laboratory Control Samples
- System Performance
- Field Duplicates

Note: X = Validation was performed.

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

- J1 Blank Contamination: Indicates possible high bias and/or false positives.
- J2 Calibration Range exceeded: Indicates possible low bias.
- J3 Holding times not met: Indicates low bias for most analytes.
- J4 Other QC parameters outside control limits: bias not readily determined.
- J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
- J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Compound quantification problems have warranted the qualification of several results in two samples as estimated (J).

The frequency of matrix spike (MS) and matrix spike duplicate (MSD) was not met as required by the QAPP. MS/MSD analyses are not required for EPA Method 1668A. The laboratory consulted with the client on this discrepancy and was instructed to proceed with the extraction and analysis despite the absence of MS/MSDs.

The frequency of SRM was not met as required by the QAPP.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at the required daily frequency.

Retention time windows were established for all congeners. The chromatographic resolution was less than or equal to 40% for congeners PCB-23 and PCB-34 and congeners PCB-182 and PCB-187.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

A five point initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for compounds.

The minimum S/N ratio for each target compound was greater than or equal to 2.5 and greater than or equal to 10 for each recovery and internal standard compound.

IV. Routine Calibration (Continuing)

Routine calibration was performed at the required frequencies.

All of the routine calibration percent differences (%D) between the initial calibration RRF and the routine calibration RRF were less than or equal to 25.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound	Concentration	Associated Samples
DPWG16148	WG15674-101	5/9/05	PCB-66 PCB-77 PCB-90 PCB-105 PCB-110 PCB-114 PCB-118 PCB-129 PCB-153 PCB-156 PCB-167	6.98 ng/Kg 0.618 ng/Kg 1.51 ng/Kg 1.64 ng/Kg 1.19 ng/Kg 0.237 ng/Kg 4.67 ng/Kg 1.35 ng/Kg 1.26 ng/Kg 0.336 ng/Kg 0.178 ng/Kg	LDW-SS-83-010 LDW-SS-86-010 LDW-SS-92-010 LDW-SS-101-010 LDW-SS-106-010 LDW-SS-108-010 LDW-SS-120-010 LDW-SS-130-010 LDW-SS-136-010 LDW-SS-141-010 LDW-SS-142-010 LDW-SS-149-010 LDW-SS-B2b-010 LDW-SS-B9a-010
DPWG16165	WG15734-101	5/15/05	PCB-66 PCB-77 PCB-90 PCB-105 PCB-110 PCB-114 PCB-118 PCB-126 PCB-129 PCB-153 PCB-156 PCB-167 PCB-169 PCB-180 PCB-189	0.190 ng/Kg 0.245 ng/Kg 0.274 ng/Kg 0.118 ng/Kg 0.221 ng/Kg 0.044 ng/Kg 0.197 ng/Kg 0.060 ng/Kg 0.165 ng/Kg 0.086 ng/Kg 0.080 ng/Kg 0.021 ng/Kg 0.023 ng/Kg 0.050 ng/Kg 0.028 ng/Kg	LDW-SS-14-010 LDW-SS-17-010 LDW-SS-19-010 LDW-SS-24-010 LDW-SS-25-010 LDW-SS-28-010 LDW-SS-46-010 LDW-SS-56-010 LDW-SS-64-010 LDW-SS-67-010 LDW-SS-71-010 LDW-SS-72-010 LDW-SS-74-010

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

A matrix spike (MS) and matrix spike duplicate (MSD) was not performed for this SDG.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. The percent recoveries (%R) were within the QC limits.

Standard reference material was performed at the required frequencies for SDG DPWG16148.

No standard reference material was performed for SDG DPWG16165.

VIII. Regional Quality Assurance and Quality Control

Not applicable.

IX. Internal Standards

All internal standard recoveries were within QC limits.

X. Target Compound Identifications

All target compound identifications were within validation criteria.

XI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria with the following exceptions:

Associated SDG	Sample	Compound	Finding	Flag	A or P
DPWG16148	LDW-SS-120-010 (150X)	PCB-90 PCB-105 PCB-110 PCB-118 PCB-129 PCB-153 PCB-189	The internal standards in this sample were not reported, however the values from both the original undiluted and diluted analyses were used to quantitate the results.	J4 (all detects)	A
DPWG16148	LDW-SS-B2b-010 (150X)	PCB-66 PCB-90 PCB-105 PCB-110 PCB-118 PCB-129 PCB-153 PCB-180 PCB-189	The internal standards in this sample were not reported, however the values from both the original undiluted and diluted analyses were used to quantitate the results.	J4 (all detects)	A

XII. System Performance

The system performance was acceptable.

XIII. Overall Assessment of Data

Data flags are summarized at the end of this report if data has been qualified.

XIV. Field Duplicates

No field duplicates were identified in this SDG.

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Were all samples associated with a method blank?
Y N N/A Was a method blank performed for each matrix and whenever a sample extraction was performed?
Y N N/A Was method blank contamination less < CRQL for all target compounds?

Blank extraction date: 5/9/05 **Blank analysis date:** 5/13/05 **Associated samples:** All

Conc. units: pg/kg

Compound	Blank ID	Sample Identification								
NG	05674-101	(5x)		#11						
PCB 66	6.98	(34.9)								
TT	0.618	(3.09)								
90/101/113	1.51	(7.55)								
105	1.64	(8.2)								
110/115	1.19	(5.95)		>5X						
114	0.236	(1.185)								
118	4.67	(23.35)

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the follcwing calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound,
C_x = Concentration of compound,
S = Standard deviation of the RRFs,

A_{is} = Area of associated internal standard
C_{is} = Concentration of internal standard
X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported RRF (CS3 std)	Recalculated RRF (CS3 std)	Reported %RSD	Recalculated %RSD

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. 7, PCB77:

Conc. = (1.79e+07)(2000)( ) / (1.72e+08)(0.91)(10.42)( )

= 21.95 ng/kg

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: DL

Method: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS instrument performance check				
Was PFK exact mass 380.9760 verified?	✓			
Were the retention time windows established for all homologues?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ ~~25% for unlabeled standards and ≤ 30% for labeled standards~~ 20.2?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard ≥ 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning of each 12 hour period?	✓			
Were all percent differences (%D) ≤ ~~40%~~ 25/35 for unlabeled and labeled standards?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		DUP
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			

LDC #: 13668B3
SDG #: JPW61165

VALIDATION FINDINGS CHECKLIST

Reviewer: 1
2nd Reviewer: 1

Validation Area	Yes	No	NA	Findings/Comments
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-150% criteria?	✓			
Was the minimum S/N ratio of all internal standard peaks > 10?	✓			
X. Target compound identification				
For polychlorinated biphenyl congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?	✓			
For polychlorinated biphenyl congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?	✓			
For other polychlorinated biphenyl congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?	✓			
Did compound spectra contain all characteristic ions listed in the table attached?	✓			
Was the Ion Abundance Ratio for the two quantitation ions within criteria?	✓			
Was the signal to noise ratio for each target compound and labeled standard ≥ 2.5?	✓			
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?	✓			
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = $(A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. 1 , PCB77:

Conc. = $\frac{(1.22e+08)(2000)(\quad)}{(9.46e+07)(1.21)(10.82)(\quad)}$

= 197.0 ng/kg

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Axys Analytical Services, Ltd. Samples were analyzed for HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A. Samples are referenced under the following Sample Delivery Group: DPW16336. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

ADDENDUM TO THE CHEMICAL DATA QUALITY REVIEW FOR PHASE 1 AND PHASE 2 SURFACE SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13738

This report details the findings of an EPA Level IV data validation review of Analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The analyses were performed by Axys Analytical Services, Ltd. Samples were analyzed for HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A. Samples are referenced under the following Sample Delivery Group: DPW16336. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the EPA Region 10 SOP for the Validation of 1668 Toxic, Dioxin-like PCB Data (Revision 1.0, December 8, 1995). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Blanks
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards
- Laboratory Control Samples
- System Performance
- Field Duplicates

Note: X = Validation was performed.

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

- J1 Blank Contamination: Indicates possible high bias and/or false positives.
- J2 Calibration Range exceeded: Indicates possible low bias.
- J3 Holding times not met: Indicates low bias for most analytes.
- J4 Other QC parameters outside control limits: bias not readily determined.
- J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
- J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

The frequency of matrix spike (MS) and matrix spike duplicate (MSD) was not met as required by the QAPP. MS/MSD analyses are not required for EPA Method 1668A. The laboratory consulted with the client on this discrepancy and was instructed to proceed with the extraction and analysis despite the absence of MS/MSDs.

The frequency of SRM was not met as required by the QAPP.

The quality control criteria reviewed were met and are considered acceptable. Based upon the data validation all results are considered valid and usable for all purposes.

HRGC/HRMS Polychlorinated Biphenyl Congeners by modified EPA Method 1668A

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. HRGC/HRMS Instrument Performance Check

Instrument performance was checked at the required daily frequency.

Retention time windows were established for all congeners. The chromatographic resolution was less than or equal to 40% for congeners PCB-23 and PCB-34 and congeners PCB-182 and PCB-187.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

A five point initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for compounds.

The minimum S/N ratio for each target compound was greater than or equal to 2.5 and greater than or equal to 10 for each recovery and internal standard compound.

IV. Routine Calibration (Continuing)

Routine calibration was performed at the required frequencies.

All of the routine calibration percent differences (%D) between the initial calibration RRF and the routine calibration RRF were less than or equal to 25.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated biphenyl contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound	Concentration	Associated Samples
DPWG16336	WG16186-101	6/23/05	PCB-66 PCB-77 PCB-90 PCB-105 PCB-110 PCB-118 PCB-129 PCB-153 PCB-156	5.13 ng/Kg 1.52 ng/Kg 20.9 ng/Kg 4.90 ng/Kg 29.4 ng/Kg 17.4 ng/Kg 22.3 ng/Kg 17.0 ng/Kg 2.67 ng/Kg	LDW-SS-84-010 LDW-SS-109-010 LDW-SS-143-010 LDW-SS-37-010 LDW-SS-6-010 LDW-SS-110-010

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

No field blanks were identified in this SDG.

VI. Matrix Spike/Matrix Spike Duplicates

A matrix spike (MS) and matrix spike duplicate (MSD) was not performed for this SDG.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Results were within QC limits.

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. The percent recoveries (%R) were within the QC limits.

Standard reference material was performed at the required frequencies for this SDG.

VIII. Regional Quality Assurance and Quality Control

Not applicable.

IX. Internal Standards

All internal standard areas and retention times were within QC limits with the following exceptions:

Associated SDG	Sample	Internal Standards	Area (Limits)	Compound
DPWG16336	WG16186-101	^{13}C-PCB 155 ^{13}C-PCB 188	19.8 (25-150) 22.1 (25-150)	PCB 129 PCB 138 PCB 153 PCB 160 PCB 163 PCB 168 PCB 180 PCB 193

X. Target Compound Identifications

All target compound identifications were within validation criteria.

XI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

XII. System Performance

The system performance was acceptable.

XIII. Overall Assessment of Data

Overall assessment of data was acceptable.

XIV. Field Duplicates

No field duplicates were identified in this SDG.

Method: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Was PFK exact mass 380.9760 verified?	✓			
Were the retention time windows established for all homologues?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ ~~25% for unlabeled standards and ≤ 30% for labeled standards~~ 20% ?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard > 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning of each 12 hour period?	✓			
Were all percent differences (%D) < ~~40%~~ 25/35 % for unlabeled and labeled standards?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet.	✓			
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		DUP
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			

LDC #: 13738A3
SDG #: DPW616336

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: W

Validation Area	Yes	No	NA	Findings/Comments
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-150% criteria?		✓		
Was the minimum S/N ratio of all internal standard peaks ≥ 10?	✓			
X. Target compound identification				
For polychlorinated biphenyl congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?	✓			
For polychlorinated biphenyl congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?	✓			
For other polychlorinated biphenyl congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?	✓			
Did compound spectra contain all characteristic ions listed in the table attached?	✓			
Was the Ion Abundance Ratio for the two quantitation ions within criteria?	✓			
Was the signal to noise ratio for each target compound and labeled standard > 2.5?	✓			
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?	✓			
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

METHOD: HRGC/HRMS Polychlorinated Biphenyls (EPA Method 1668)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported RRF (CS3 std)	Recalculated RRF (CS3 std)	Reported %RSD	Recalculated %RSD

Y N N/A Were all reported results recalculated and verified for all level IV samples?

Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

RRF = Relative response factor of the calibration standard.

V_o = Volume or weight of sample pruged in milliliters (ml) or grams (g).

Df = Dilution factor.

%S = Percent solids, applicable to soils and solid matrices only.

Example:

Sample I.D. 1, PCB77:

Conc. = $\frac{(3.93e+07)(8000)(\quad)}{(1.38e+06)(0.96)(5.26)(\quad)}$

= 45117.6 ng/Kg.

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Axys Analytical Services. Samples were analyzed for HRGC/MS Dioxin/Dibenzofurans by EPA Method 1613B. Samples are referenced under the following Sample Delivery Groups: DPWG16036 and DPWG16057. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

CHEMICAL DATA QUALITY REVIEW FOR PHASE I AND PHASE 2 SURFACE SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13655

This report details the findings of an EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Axys Analytical Services. Samples were analyzed for HRGC/MS Dioxin/Dibenzofurans by EPA Method 1613B. Samples are referenced under the following Sample Delivery Groups: DPWG16036 and DPWG16057. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the EPA Region 10 SOP for the Validation of Polychlorinated Dibenzodioxin (PCDD) and Polychlorinated Dibenzofuran (PCDF) Data (Revision 2.0 January 31, 1996). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Instrument Calibration
- Blanks
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards
- Laboratory Control Samples
- Target Compound Identifications
- Compound Quantitation and CRQLs
- System Performance
- Field Duplicates

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

- J1 Blank Contamination: Indicates possible high bias and/or false positives.
- J2 Calibration Range exceeded: Indicates possible low bias.
- J3 Holding times not met: Indicates low bias for most analytes.
- J4 Other QC parameters outside control limits: bias not readily determined.
- J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
- J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Method blank contamination have warranted the qualification of several compounds as non-detected (U).

Laboratory duplicate precision and SRM accuracy exceedances have warranted the qualification of results as estimated (J).

The frequency of matrix spike (MS) and matrix spike duplicate (MSD) was not met as required by the QAPP. MS/MSD analyses are not required for EPA Method 1613B. The laboratory consulted with the client on this discrepancy and was instructed to proceed with the extraction and analysis despite the absence of MS/MSDs.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

HRGC/HRMS Dioxins/Dibenzofurans By EPA Method 1613B

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at the required daily frequency.

Retention time windows were established for all homologues. The chromatographic resolution between ^{13}C-2,3,7,8-TCDD and ^{13}C-1,2,3,4-TCDD was less than or equal to 25%.

The ion abundance ratios for all PCDDs and PCDFs were within validation criteria.

III. Initial Calibration

A five point initial calibration was performed as required by the method.

Percent relative standard deviations (%RSD) were less than or equal to 20.0% for all calibration check compounds and less than or equal to 35.0% for all other compounds.

The ion abundance ratios for all PCDDs and PCDFs were within validation criteria.

The minimum S/N ratio was technically acceptable.

IV. Routine Calibration (Continuing)

Routine calibration was performed at the required frequencies.

All of the routine calibration concentrations were within the QC limits.

The ion abundance ratios for all PCDDs and PCDFs were within method criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated dioxin/dibenzofuran contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound	Concentration	Associated Samples
DPWG16036	WG15383-101	4/29/05	2,3,7,8-TCDD 1,2,3,7,8-PeCDD 1,2,3,4,7,8-HxCDD 1,2,3,6,7,8-HxCDD 1,2,3,7,8,9-HxCDD 1,2,3,4,6,7,8-HpCDD OCDD Total PeCDD Total HpCDD	0.134 ng/Kg 0.100 ng/Kg 0.070 ng/Kg 0.054 ng/Kg 0.100 ng/Kg 0.113 ng/Kg 0.158 ng/Kg 0.100 ng/Kg 0.113 ng/Kg	EB-SS2b-010 LDW-SS131-010 LDW-SS206-010 LDW-SS71-010 LDW-SS59R2-010
DPWG16057	WG15727-101	5/12/05	1,2,3,4,6,7,8-HpCDD OCDD 1,2,3,4,7,8,9-HpCDF OCDF Total HpCDD	0.111 ng/Kg 0.275 ng/Kg 0.058 ng/Kg 0.094 ng/Kg 0.111 ng/Kg	LDW-SS-84-010 LDW-SS59-010 LDW-SS-109-010 LDW-SS-143-010 LDW-SS-37-010

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks with the following exceptions:

Associated SDG	Sample	Compound	Reported Concentration	Modified Final Concentration
DPWG16036	EB-SS2b-010 (5x)	2,3,7,8-TCDD	0.757 ng/Kg	0.757U ng/Kg
DPWG16036	LDW-SS71-010	2,3,7,8-TCDD	0.560 ng/Kg	0.560U ng/Kg
DPWG16036	LDW-SS59R2-010 (5x)	2,3,7,8-TCDD	1.04 ng/Kg	1.04U ng/Kg

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
DPWG16057	LDW-SS59-010DUP (LDW-SS59-010)	1,2,3,6,7,8-HxCDD	63.0 (≤50)	J4 (all detects)	A

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. The percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits with the following exceptions:

Associated SDG	SRM ID	Compound	Concentration (Limits)	Associated Samples	Flag	A or P
DPWG16036	SRM	1,2,3,7,8,9-HxCDF	4.43 ng/Kg (48-60)	EB-SS2b-010 LDW-SS131-010 LDW-SS206-010 LDW-SS71-010 LDW-SS59R2-010	J6 (all detects) UJ6 (all non-detects)	A
DPWG16057	SRM	1,2,3,7,8,9-HxCDF	2.65 ng/Kg (48-60)	LDW-SS-84-010 LDW-SS59-010 LDW-SS-109-010 LDW-SS-143-010 LDW-SS-37-010	J6 (all detects) UJ6 (all non-detects)	A

Although the concentrations of 1,2,3,7,8,9-HxCDF were less than 10% of the certified value, the associated results were qualified as estimated (J/UJ) since the LCS recoveries were within QC limts.

VIII. Regional Quality Assurance and Quality Control

Not applicable.

IX. Internal Standards

All internal standard recoveries were within QC limits.

X. Target Compound Identifications

All target compound identifications were within validation criteria.

XI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

XII. System Performance

The system performance was acceptable.

XIII. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
DPWG16036	EB-SS2b-010 LDW-SS131-010 LDW-SS206-010 LDW-SS71-010 LDW-SS59R2-010	2,3,7,8-TCDF (DB-5)	R	A
DPWG16057	LDW-SS-84-010 LDW-SS59-010 LDW-SS-109-010 LDW-SS-143-010 LDW-SS-37-010	2,3,7,8-TCDF (DB-5)	R	A

Data flags are summarized at the end of this report if data has been qualified.

XIV. Field Duplicates

Samples LDW-SS131-010 and LDW-SS206-010 were identified as field duplicates. No polychlorinated dioxins/dibenzofurans were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ng/Kg)		RPD (Limits)
		LDW-SS131-010	LDW-SS206-010	
DPWG16036	2,3,7,8-TCDD	1.07	2.41	77 (≤50)

Method: Dioxins/Dibenzofurans (EPA SW 846 Method 1613)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Was PFK exact mass 380.9760 verified?	✓			
Were the retention time windows established for all homologues?	✓			
Was the chromatographic resolution between 2,3,7,8-TCDD and peaks representing any other unlabeled TCDD isomers ≤ 25% ?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
Was the presence of 1,2,8,9-TCDD and 1,3,4,6,8-PeCDF verified?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% for unlabeled standards and ≤ ~~30~~ 35% for labeled standards?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard ≥ 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning and end of each 12 hour period?	✓			
Were all ~~percent differences (%D) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards~~? conc meet QC limits ?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet?		✓		
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		DUP
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			

Validation Area	Yes	No	NA	Findings/Comments
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-125% criteria?	✓			
Was the minimum S/N ratio of all internal standard peaks ≥ 10?	✓			
X. Target compound identification				
For 2,3,7,8 substituted congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?	✓			
For 2,3,7,8 substituted congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?	✓			
For non-2,3,7,8 substituted congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?	✓			
Did compound spectra contain all characteristic ions listed in the table attached?	✓			
Was the Ion Abundance Ratio for the two quantitation ions within criteria?	✓			
Was the signal to noise ratio for each target compound and labeled standard ≥ 2.5?	✓			
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?	✓			
For PCDF identification, was any signal (S/N ≥ 2.5, at ± seconds RT) detected in the corresponding PCDPE channel?	✓			
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target compounds were detected in the field duplicates.	✓			
XV. Field blanks

Initial Calibration Calculation Verification

Reviewer: 1
2nd Reviewer: 1

METHOD: HRGC/HRMS Dioxins/Dibenzofurans (EPA Method 1613B)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$ — A_x = Area of compound, A_{is} = Area of associated internal standard
average RRF = sum of the RRFs/number of standards — C_x = Concentration of compound, C_{is} = Concentration of internal standard
%RSD = 100 * (S/X) — S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported RRF (CS3 std)	Recalculated RRF (CS3 std)	Reported %RSD	Recalculated %RSD

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
$RRF = (A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

RRF = Relative Response Factor (average) from the initial calibration

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

Example:

Sample I.D. 1 , A :

Conc. = $\frac{(1.3\text{E+}05)(2000)(1)}{(3.62\text{E+}07)(1.01)(9.89)(\ )}$

= 0.7577 ng/g

Reviewer: 9
2nd Reviewer: ✓

Method: Dioxins/Dibenzofurans (EPA SW 846 Method 1613)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Was PFK exact mass 380.9760 verified?	✓			
Were the retention time windows established for all homologues?	✓			
Was the chromatographic resolution between 2,3,7,8-TCDD and peaks representing any other unlabeled TCDD isomers ≤ 25% ?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
Was the presence of 1,2,8,9-TCDD and 1,3,4,6,8-PeCDF verified?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard ≥ 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning and end of each 12 hour period?	✓			
Were all ~~percent differences (%D) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards?~~ conc meet QC limits?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet?	✓			
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		DUP
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			

Validation Area	Yes	No	NA	Findings/Comments
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-125% criteria?	✓			
Was the minimum S/N ratio of all internal standard peaks ≥ 10?	✓			
X. Target compound identification				
For 2,3,7,8 substituted congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?	✓			
For 2,3,7,8 substituted congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?	✓			
For non-2,3,7,8 substituted congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?	✓			
Did compound spectra contain all characteristic ions listed in the table attached?	✓			
Was the Ion Abundance Ratio for the two quantitation ions within criteria?	✓			
Was the signal to noise ratio for each target compound and labeled standard ≥ 2.5?	✓			
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?	✓			
For PCDF identification, was any signal (S/N ≥ 2.5, at ± seconds RT) detected in the corresponding PCDPE channel?	✓			
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks				

Validation Area	Yes	No	NA	Findings/Comments
Field blanks were identified in this SDG.		✓		
Target compounds were detected in the field blanks.			✓

VALIDATION FINDINGS WORKSHEET
Initial Calibration Calculation Verification

Reviewer: 1
2nd Reviewer: K

METHOD: HRGC/HRMS Dioxins/Dibenzofurans (EPA Method 1613B)

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of asscciated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported RRF (CS3 std)	Recalculated RRF (CS3 std)	Reported %RSD	Recalculated %RSD

METHOD: HRGC/HRMS Dioxins/Dibenzofurans (EPA Method 1613B)

The percent difference (%D) of the initial calibration average Relative Response Factors (RRFs) and the continuing calibration RRFs were recalculated for the compounds identified below using the following calculation:

% Difference = 100 * (ave. RRF - RRF)/ave. RRF
RRF = $(A_x)(C_{is})/(A_{is})(C_x)$

Where: ave. RRF = initial calibration average RRF
RRF = continuing calibration RRF
A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard

SUBJECT: Lower Duwamish Waterway Group Sediment Sample Data Validation

Dear Ms. McGroddy,

Enclosed is our EPA Level II and Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Axys Analytical Services. Samples were analyzed for HRGC/MS Dioxin/Dibenzofurans by EPA Method 1613B. Samples are referenced under the following Sample Delivery Groups: DPWG15547 and DPWG15584. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed.

Please feel free to contact us if you have any questions.

Sincerely,

Stella S. Cuenco
Project Manager/Senior Chemist

ADDENDUM
CHEMICAL DATA QUALITY REVIEW FOR PHASE I SURFACE SEDIMENT SAMPLES

Lower Duwamish Waterway Group
LDC# 13425, 13439

This report details the findings of an EPA Level IV data validation of analytical chemistry results generated in support of the Lower Duwamish Waterway Group project. The primary analyses were performed by Axys Analytical Services. Samples were analyzed for HRGC/MS Dioxin/Dibenzofurans by EPA Method 1613B. Samples are referenced under the following Sample Delivery Groups: DPWG15547 and DPWG15584. See the Sample Analysis Table (Attachment 1) for the number of samples reviewed and the Sample Validation Table (Attachment 2) for the sample identifications and analyses.

The QC guidelines used for data qualification are those specified in the EPA Region 10 SOP for the Validation of Polychlorinated Dibenzodioxin (PCDD) and Polychlorinated Dibenzofuran (PCDF) Data (Revision 2.0 January 31, 1996). Specific QC criteria used follows the Surface Sediment Sampling for Chemical Analyses and Toxicity Testing of the Lower Duwamish Waterway Quality Assurance Project Plan (January 14, 2005). Where specific guidance is not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The following items were evaluated during the review:

- Holding Times
- Sample Preservation
- Cooler Temperatures
- Instrument Calibration
- Blanks
- Matrix Spike/Matrix Spike Duplicates
- Internal Standards
- Laboratory Control Samples
- Target Compound Identifications
- Compound Quantitation and CRQLs
- System Performance
- Field Duplicates

Only issues which require comment or action are discussed in this report. Data deficiencies are arranged by method. Potential effects of data anomalies have been described where possible.

The following are definitions of the data qualifiers:

U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.

J Indicates an estimated value.

- J1 Blank Contamination: Indicates possible high bias and/or false positives.
- J2 Calibration Range exceeded: Indicates possible low bias.
- J3 Holding times not met: Indicates low bias for most analytes.
- J4 Other QC parameters outside control limits: bias not readily determined.
- J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
- J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.

R Quality control indicates the data is not usable.

N Presumptive evidence of presence of the constituent.

UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.

A Indicates the finding is based upon technical validation criteria.

P Indicates the finding is related to a protocol/contractual deviation.

Overall Data Assessment

Laboratory duplicate precision and SRM accuracy exceedances have warranted the qualification of results as estimated (J).

The frequency of matrix spike (MS) and matrix spike duplicate (MSD) was not met as required by the QAPP. MS/MSD analyses are not required for EPA Method 1613B. The laboratory consulted with the client on this discrepancy and was instructed to proceed with the extraction and analysis despite the absence of MS/MSDs.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

HRGC/HRMS Dioxins/Dibenzofurans By EPA Method 1613B

I. Technical Holding Times

All technical holding time requirements were met.

The chain-of-custodies were reviewed for documentation of cooler temperatures. All cooler temperatures met validation criteria.

II. GC/MS Instrument Performance Check

Instrument performance was checked at the required daily frequency.

Retention time windows were established for all homologues. The chromatographic resolution between ^{13}C-2,3,7,8-TCDD and ^{13}C-1,2,3,4-TCDD was less than or equal to 25%.

The ion abundance ratios for all PCDDs and PCDFs were within validation criteria.

III. Initial Calibration

A five point initial calibration was performed as required by the method.

Percent relative standard deviations (%RSD) were less than or equal to 20.0% for all calibration check compounds and less than or equal to 35.0% for all other compounds.

The ion abundance ratios for all PCDDs and PCDFs were within validation criteria.

The minimum S/N ratio was technically acceptable.

IV. Routine Calibration (Continuing)

Routine calibration was performed at the required frequencies.

All of the routine calibration concentrations were within the QC limits.

The ion abundance ratios for all PCDDs and PCDFs were within method criteria.

V. Blanks

Method blanks were reviewed for each matrix as applicable. No polychlorinated dioxin/dibenzofuran contaminants were found in the method blanks with the following exceptions:

Associated SDG	Method Blank ID	Extraction Date	Compound	Concentration	Associated Samples
DPWG15547	WG15017-101	2/10/05	1,2,3,4,6,7,8-HpCDD OCDD 2,3,4,7,8-PeCDF OCDF Total HpCDD	0.087 ng/Kg 0.282 ng/Kg 0.058 ng/Kg 0.097 ng/Kg 0.139 ng/Kg	LDW-SS-14-010 LDW-SS-22-010 LDW-SS-127-010 LDW-SS-43-010 LDW-SS-57-010 LDW-SS-28-010 LDW-SS-36-010 LDW-SS-83-010 LDW-SS-56-010 LDW-SS-64-010 LDW-SS-58-010 LDW-SS-203-010 LDW-SS-123-010
DPWG15584	WG15060-101	2/21/05	1,2,3,4,6,7,8-HpCDD OCDD OCDF Total HpCDD	0.084 ng/Kg 0.224 ng/Kg 0.058 ng/Kg 0.084 ng/Kg	SC-SS1a-010 EB-SS2a-010 LW-SS3-010 LW-SS6-010 SB-SS6-010 DRD-SS7-010 UB-SS8-010 LU-SS9a-010 LU-SS9b-010 LDW-SS20-010 LDW-SS18-010 LW-SS4-010 LW-SS5a-010 LW-SS5b-010 SC-SS1b-010

Sample concentrations were compared to concentrations detected in the method blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated method blanks.

VI. Matrix Spike/Matrix Spike Duplicates

Matrix spike (MS) and matrix spike duplicate (MSD) analyses were not required by the method.

Duplicate (DUP) sample analyses were reviewed for each matrix as applicable. Relative percent differences (RPD) were within QC limits with the following exceptions:

Associated SDG	DUP ID (Associated Samples)	Compound	RPD (Limits)	Flag	A or P
DPWG15547	LDW-SS-14-010DUP (LDW-SS-14-010)	1,2,3,4,6,7,8-HpCDD OCDD	65.2 (≤50) 52.2 (≤50)	J4 (all detects) J4 (all detects)	A

VII. Laboratory Control Samples (LCS)

Laboratory control samples were reviewed for each matrix as applicable. The percent recoveries (%R) were within QC limits.

Standard reference material were within QC limits with the following exceptions:

Associated SDG	SRM ID	Compound	Concentration (Limits)	Associated Samples	Flag	A or P
DPWG15547	SRM	1,2,3,7,8,9-HxCDF	2.41 mg/Kg (66.5-199.5)	LDW-SS-14-010 LDW-SS-22-010 LDW-SS-127-010 LDW-SS-43-010 LDW-SS-57-010 LDW-SS-28-010 LDW-SS-36-010 LDW-SS-83-010 LDW-SS-56-010 LDW-SS-64-010 LDW-SS-58-010 LDW-SS-203-010 LDW-SS-123-010	J6 (all detects) UJ6 (all non-detects)	A

Associated SDG	SRM ID	Compound	Concentration (Limits)	Associated Samples	Flag	A or P
DPWG15584	SRM	1,2,3,7,8,9-HxCDF	2.37 mg/Kg (66.5-199.5)	SC-SS1a-010 EB-SS2a-010 LW-SS3-010 LW-SS6-010 SB-SS6-010 DRD-SS7-010 UB-SS8-010 LU-SS9a-010 LU-SS9b-010 LDW-SS20-010 LDW-SS18-010 LW-SS4-010 LW-SS5a-010 LW-SS5b-010 SC-SS1b-010	J6 (all detects) UJ6 (all non-detects)	A
DPWG15584	SRM	2,3,4,6,7,8-HxCDF	39.5 mg/Kg (9.5-28.5)	SC-SS1a-010 EB-SS2a-010 LW-SS3-010 LW-SS6-010 SB-SS6-010 DRD-SS7-010 UB-SS8-010 LU-SS9a-010 LU-SS9b-010 LDW-SS20-010 LDW-SS18-010 LW-SS4-010 LW-SS5a-010 LW-SS5b-010 SC-SS1b-010	J5 (all detects)	A

Although the concentrations of 1,2,3,7,8,9-HxCDF were less than 10% of the certified value, the associated results were qualified as estimated (J/UJ) since the LCS recoveries were within QC limts.

VIII. Regional Quality Assurance and Quality Control

Not applicable.

IX. Internal Standards

All internal standard recoveries were within QC limits.

X. Target Compound Identifications

All target compound identifications were within validation criteria.

XI. Compound Quantitation and CRQLs

All compound quantitation and CRQLs were within validation criteria.

XII. System Performance

The system performance was acceptable.

XIII. Overall Assessment of Data

The overall assessment of data was acceptable. In the case where more than one result was reported for an individual sample, the least technically acceptable results were rejected as follows:

Associated SDG	Sample	Compound	Flag	A or P
DPWG15547 DPWG15584	LDW-SS-14-010 LDW-SS-22-010 LDW-SS-127-010 LDW-SS-43-010 LDW-SS-57-010 LDW-SS-28-010 LDW-SS-36-010 LDW-SS-83-010 LDW-SS-56-010 LDW-SS-64-010 LDW-SS-58-010 LDW-SS-203-010 LDW-SS-123-010 SC-SS1a-010 EB-SS2a-010 LW-SS3-010 LW-SS6-010 SB-SS6-010 DRD-SS7-010 UB-SS8-010 LU-SS9a-010 LU-SS9b-010 LDW-SS20-010 LDW-SS18-010 LW-SS4-010 LW-SS5a-010 LW-SS5b-010 SC-SS1b-010	2,3,7,8-TCDF (DB-5)	R	A

Data flags have been summarized at the end of the report.

XIV. Field Duplicates

Samples LDW-SS-203-010 and LDW-SS-123-010 (SDG DPWG15547) were identified as field duplicates. No polychlorinated dioxins/dibenzofurans were detected in any of the samples with the following exceptions:

Associated SDG	Compound	Concentration (ng/Kg)		RPD (Limits)
		LDW-SS-203-010	LDW-SS-123-010	
DPWG15547	2,3,7,8-TCDD	0.273	0.247	10 (≤50)

VALIDATION FINDINGS CHECKLIST

Reviewer: [illegible]
2nd Reviewer: [illegible]

Method: Dioxins/Dibenzofurans (EPA SW 846 Method 1613)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Was PFK exact mass ~~380.9760~~ verified?	✓			
Were the retention time windows established for all homologues?	✓			
Was the chromatographic resolution between 2,3,7,8-TCDD and peaks representing any other unlabeled TCDD isomers ≤ 25% ?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
Was the presence of 1,2,8,9-TCDD and 1,3,4,6,8-PeCDF verified?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% for unlabeled standards and ≤ ~~30~~ 35% for labeled standards?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard ≥ 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning and end of each 12 hour period?	✓			
Were all percent differences (%D) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet?	✓			
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			

LDC #: 13425A21
SDG #: MDW61552

VALIDATION FINDINGS CHECKLIST

Reviewer: CK
2nd Reviewer: KC

Validation Area	Yes	No	NA	Findings/Comments
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-125% criteria?	✓			
Was the minimum S/N ratio of all internal standard peaks ≥ 10?	✓			
X. Target compound identification				
For 2,3,7,8 substituted congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?			✓	
For 2,3,7,8 substituted congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?			✓	
For non-2,3,7,8 substituted congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?			✓	
Did compound spectra contain all characteristic ions listed in the table attached?			✓	
Was the Ion Abundance Ratio for the two quantitation ions within criteria?			✓	
Was the signal to noise ratio for each target compound and labeled standard ≥ 2.5?			✓	
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?			✓	
For PCDF identification, was any signal (S/N ≥ 2.5, at ± seconds RT) detected in the corresponding PCDPE channel?			✓	
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.	✓			
Target compounds were detected in the field duplicates.	✓			
XV. Field blanks

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identified below using the following calculations:

$RRF = (A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound, A_{is} = Area of associated internal standard
C_x = Concentration of compound, C_{is} = Concentration of internal standard
S = Standard deviation of the RRFs, X = Mean of the RRFs

#	Standard ID	Calibration Date	Compound (Reference Internal Standard)	Reported Average RRF (initial)	Recalculated Average RRF (initial)	Reported RRF (C3 std)	Recalculated RRF (C3 std)	Reported %RSD	Recalculated %RSD

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

RRF = Relative Response Factor (average) from the initial calibration

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

Example:

Sample I.D. 1 , F :

Conc. = $\frac{(5.74e+07)(2000)(1)}{(3.69e+08)(0.99)(11.2)(\ )}$

= 28.0 ng/kg

Method: Dioxins/Dibenzofurans (EPA SW 846 Method 1613)

Validation Area	Yes	No	NA	Findings/Comments
I. Technical holding times				
All technical holding times were met.	✓			
Cooler temperature criteria was met.	✓			
II. GC/MS Instrument performance check				
Was PFK exact mass 380.9760 verified?	✓			
Were the retention time windows established for all homologues?	✓			
Was the chromatographic resolution between 2,3,7,8-TCDD and peaks representing any other unlabeled TCDD isomers ≤ 25% ?	✓			
Is the static resolving power at least 10,000 (10% valley definition)?	✓			
Was the mass resolution adequately check with PFK?	✓			
Was the presence of 1,2,8,9-TCDD and 1,3,4,6,8-PeCDF verified?	✓			
III. Initial calibration				
Was the initial calibration performed at 5 concentration levels?	✓			
Were all percent relative standard deviations (%RSD) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards?	✓			
Did all calibration standards meet the Ion Abundance Ratio criteria?	✓			
Was the signal to noise ratio for each target compound ≥ 2.5 and for each recovery and internal standard ≥ 10?	✓			
IV. Continuing calibration				
Was a routine calibration performed at the beginning and end of each 12 hour period?	✓			
~~Were all percent differences (%D) ≤ 20% for unlabeled standards and ≤ 30% for labeled standards?~~ conc meet RC limits ?	✓			
Did all routine calibration standards meet the Ion Abundance Ratio criteria?	✓			
V. Blanks				
Was a method blank associated with every sample in this SDG?	✓			
Was a method blank performed for each matrix and concentration?	✓			
Was there contamination in the method blanks? If yes, please see the Blanks validation completeness worksheet?	✓			
VI. Matrix spike/Matrix spike duplicates				
Were a matrix spike (MS) and matrix spike duplicate (MSD) analyzed for each matrix in this SDG? If no, indicate which matrix does not have an associated MS/MSD. Soil / Water.		✓		
Were the MS/MSD percent recoveries (%R) and the relative percent differences (RPD) within the QC limits?			✓	
VII. Laboratory control samples				
Was an LCS analyzed for this SDG?	✓			
Was an LCS analyzed per extraction batch?	✓			

LDC #: 13439A21
SDG #: DPW615584

VALIDATION FINDINGS CHECKLIST

Reviewer: 9
2nd Reviewer: DK

Validation Area	Yes	No	NA	Findings/Comments
Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?	✓			
VIII. Regional Quality Assurance and Quality Control				
Were performance evaluation (PE) samples performed?		✓		
Were the performance evaluation (PE) samples within the acceptance limits?			✓	
IX. Internal standards				
Were internal standard recoveries within the 25-125% criteria?	✓			
Was the minimum S/N ratio of all internal standard peaks ≥ 10?	✓			
X. Target compound identification				
For 2,3,7,8 substituted congeners with associated labeled standards, were the retention times of the two quantitation peaks within -1 to 3 sec. of the RT of the labeled standard?	✓		✓	
For 2,3,7,8 substituted congeners without associated labeled standards, were the relative retention times of the two quantitation peaks within 0.005 time units of the RRT measured in the routine calibration?	✓		✓	
For non-2,3,7,8 substituted congeners, were the retention times of the two quantitation peaks within RT established in the performance check solution?	✓		✓	
Did compound spectra contain all characteristic ions listed in the table attached?	✓		✓	
Was the Ion Abundance Ratio for the two quantitation ions within criteria?	✓		✓	
Was the signal to noise ratio for each target compound and labeled standard ≥ 2.5?	✓		✓	
Does the maximum intensity of each specified characteristic ion coincide within ± 2 seconds (includes labeled standards)?	✓		✓	
For PCDF identification, was any signal (S/N ≥ 2.5, at ± seconds RT) detected in the corresponding PCDPE channel?	✓		✓	
Was an acceptable lock mass recorded and monitored?	✓			
XI. Compound quantitation/CRQLs				
Were the correct internal standard (IS), quantitation ion and relative response factor (RRF) used to quantitate the compound?	✓			
Were compound quantitation and CRQLs adjusted to reflect all sample dilutions and dry weight factors applicable to level IV validation?	✓			
XII. System performance				
System performance was found to be acceptable.	✓			
XIII. Overall assessment of data				
Overall assessment of data was found to be acceptable.	✓			
XIV. Field duplicates				
Field duplicate pairs were identified in this SDG.		✓		
Target compounds were detected in the field duplicates.			✓	
XV. Field blanks

The Relative Response Factor (RRF), average RRF, and percent relative standard deviation (%RSD) were recalculated for the compounds identifed below using the following calculations:

RRF = $(A_x)(C_{is})/(A_{is})(C_x)$
average RRF = sum of the RRFs/number of standards
%RSD = 100 * (S/X)

A_x = Area of compound,
C_x = Concentration of compound,
S = Standard deviation of the RRFs,

A_{is} = Area of associated internal standard
C_{is} = Concentration of internal standard
X = Mean of the RRFs

METHOD: HRGC/HRMS Dioxins/Dibenzofurans (EPA SW 846 Method ~~8290~~ 1613)

Y N N/A Were all reported results recalculated and verified for all level IV samples?
Y N N/A Were all recalculated results for detected target compounds agree within 10.0% of the reported results?

Concentration = $\frac{(A_x)(I_s)(DF)}{(A_{is})(RRF)(V_o)(\%S)}$

A_x = Area of the characteristic ion (EICP) for the compound to be measured

A_{is} = Area of the characteristic ion (EICP) for the specific internal standard

I_s = Amount of internal standard added in nanograms (ng)

V_o = Volume or weight of sample extract in milliliters (ml) or grams (g).

RRF = Relative Response Factor (average) from the initial calibration

Df = Dilution Factor.

%S = Percent solids, applicable to soil and solid matrices only.

Example:

Sample I.D. 1, #A:

Conc. = $\frac{(8.28e+04)(2000)(1)}{(1.24e+07)(1.02)(10.4)(\ )}$

= 1.259 ng/g

1.0 INTRODUCTION

Northwestern Aquatic Sciences (NAS), Newport, Oregon was contracted by Windward Environmental LLC to conduct amphipod and polychaete bioassays of sediments collected from the Lower Duwamish Waterway in March 2005. NAS is a State of Washington accredited laboratory (Lab accreditation number C042, expiration: 30 September 2005) and is certified to perform amphipod and polychaete tests using the Puget Sound Estuary Program (PSEP 1995) protocols. A copy of NAS' accreditation certificate and Scope of Accreditation appears in Appendix 1.

This report summarizes the Quality Assurance/Quality Control (QA/QC) evaluations of the second of two rounds of amphipod (*Eohaustorius estuarius*) and polychaete (*Neanthes arenaceodentata*) bioassays of sediments collected from the Lower Duwamish Waterway in March 2005. Testing for Round 2 was initiated on 29 April 2005. Results of QA/QC evaluations of the Round 1 testing can be found in DMR (2005).

The QA steps taken to ensure high quality data and maximum data completeness before, during and after this round of testing are described in this report. Major QA tasks by Dinnel Marine Resources (DMR) included the following:

I. A pre-test review of NAS' Standard Operating Procedures (SOPs)
- Pre-test coordination with NAS and Windward Environmental
- An initial evaluation of all data for completeness, correct data entries, and accurate transcription to electronic formats
- A final QA evaluation of overall data quality and usability (this report)

2.0 QUALITY ASSURANCE AUDIT RESULTS

2.1 LABORATORY PROTOCOLS AND SOPs

The PSEP protocols (PSEP 1995) for conducting amphipod and polychaete bioassays and NAS' laboratory SOPs (NAS-XXX-EE4, Rev. 3 and NAS-XXX-NA4, Rev. 4) for the *Eohaustorius* and *Neanthes* tests were reviewed in detail prior to the initiation of testing. NAS' SOPs were in excellent condition, and no changes were needed other than the addition of some project-specific provisions requested by Windward Environmental. A letter detailing the project-specific test provisions was sent to NAS on 23 February 2005 (Appendix 2).

2.2 TEST-IN-PROGRESS AUDITS

An unannounced test-in-progress audit of both Round 2 tests was conducted by Dr. Paul Dinnel on 3 May 2005. All PSEP and project-specific protocol provisions were being followed without any apparent deviations. The only water quality deviation noted was that a few test chamber temperatures were slightly elevated in the *Neanthes* test on Day 3. Completed test-in-progress audit checklists for the amphipod and polychaete bioassays appear in Appendix 3.

2.3 INITIAL DATA EVALUATIONS

All raw data forms and electronic database files were reviewed for completeness and fidelity of transcription to electronic formats. A 100% check was made of all data entered into NAS' internal electronic database. All errors, omissions, clarifications, or changes needed to NAS' draft report were documented and communicated to NAS. A copy of the initial data evaluation report to NAS appears in Appendix 4. All needed corrections to the data report were made by NAS and subsequently verified by DMR (see NAS response letter in Appendix 4).

PSEP (1995) water quality assurance parameters were primarily used for QA assessments of the sediment tests. Where specific values were lacking in PSEP, PSDDA (1994) values were used. These values are summarized in Table 1 for the *Eohaustorius* and *Neanthes* tests. Note that these protocol provisions have occasionally been modified via clarification and issue papers prepared by the U.S. Army Corps of Engineers (USACOE) and the other relevant sediment management agencies (USACOE 1991-2005).

2.4 FINAL QA EVALUATION OF OVERALL DATA QUALITY AND USABILITY

Following corrections to the data reports by NAS personnel, a 100% check was made to verify each correction. Following this, an overall evaluation of data completeness and quality was accomplished (this report). Conclusions regarding data completeness and quality follow below.

2.4.1 Chain of Custody and Sample Holding

All chain of custody protocols were properly observed in transfers of sediment samples from Windward Environmental to NAS. The test and reference sediments were stored at 4° C in a locked cold room until testing was initiated. If samples contained significant headspaces, these head spaces were purged of air with nitrogen gas prior to storage.

Table 1. PSEP (1995) and PSDDA (1994) water quality assurance parameters for the *Eohaustorius* and *Neanthes* tests, as occasionally modified by USACOE clarification and issue papers.

Parameter	*Eohaustorius*	*Neanthes*
Temperature, °C	14 – 16	19 - 21
Salinity, ppt	Ambient Interstitial*	28 – 35 (PSDDA) 26 – 30 (PSEP)
Dissolved oxygen, mg/liter	>4.0	>4.5
pH	7 – 9	7 - 9
Total Ammonia, mg/liter	60**	≤10*** 10-20***
Total Sulfide, mg/liter	**3.4*** **	**0.5**[#]

* A project-specific salinity of 28 ± 1 ppt was chosen for the *Eohaustorius* tests
** U.S. EPA No Effect Concentration (EPA 1994) (Discussed in Barton 2002)
*** DMMP No effects (≤10) and possible minor effects (10-20) thresholds (Kendall and Barton 2004)
[#] Based on values for *Rhepoxynius* and *Ampelisca*

2.4.2 *Eohaustorius* Test 725-7

1. A *Eohaustorius estuarius* bioassay was conducted on 21 Lower Duwamish River sediment samples, plus 3 reference sediments. A negative control, and two positive (toxic) controls with cadmium and ammonia were run concurrently with the Lower Duwamish test sediments.

2. Testing was initiated within 53 days following sediment collection, which was within the 8 week limit specified in Windward Environmental's Quality Assurance Project Plan (QAPP) (Windward 2005).

3. This test was completed with no protocol deviations and two water quality deviations. The two water quality deviations were: 1) overlying salinities in some test chambers were outside the project-specified salinity of 28 ± 1 ppt by up to 2 ppt. Some of the chamber salinities were up to 0.5 ppt low due to low initial interstitial salinities and some up to 2.0 ppt high due to evaporation during the latter half of the test. These

salinity deviations should not have significantly affected the results of this test. 2) Temperature and pH measurements were inadvertently omitted in one test chamber on Day 8, resulting a a few missing water quality data points.

4. The reference toxicant 50% Lethal Concentration (LC50) for the cadmium test was 2.09 mg/liter. This result was within NAS' control chart warning limits of 0.54 – 5.86 mg Cd/liter. The ammonia LC50 was 163 mg/liter total ammonia. This result was within NAS' control chart warning limits of 64.7 – 224 mg/liter total ammonia. The ammonia test control survival was 85 % (100 % survival in one replicate, 70 % in the other), which is slightly below the protocol-specified 90 %. Since the LC50 in the ammonia test was essentially in the middle of the control chart warning limits, the slightly low control survival does not appear to be a significant issue.

5. Negative control mean mortality (0 %) was <10% for this test and thus acceptable by present PSEP and PSDDA criteria. The mean mortality responses for the reference sediments ranged from 2.0 to 24.0 %, which were within the PSDDA limit of ≤ 25 %.

6. The maximum ammonia concentration measured in the overlying water during this test in any one sample was 19.3 mg/liter total ammonia. This is well below the EPA NOEC threshold concentration of 60 mg/liter and well below NAS' reference toxicant test LC50 of 163 mg/liter. Thus, ammonia concentrations were not high enough to cause significant stresses in this test.

7. No sulfides were detected in any of the test sample overlying waters (detection limit 0.02 mg/liter). Thus, sulfide levels in this test were not high enough to interfere.

8. Replication was five-fold for all samples as specified by PSDDA.

9. Data completeness for the 21 (plus 3 control) samples tested with *Eohaustorius* was >99 %.

10. **Final QA determination:** All data are of excellent quality and fully usable for any purpose.

Table 2. Summary of *Eohaustorius* Test 725-7.

<u>*Eohaustorius estuarius*, 29 April to 9 May 2005:</u>
Number of test samples, including reference sediments: 24
Sediment holding time <8 weeks?: Yes
Protocol deviations?: No
Average negative control mortality: 0 %
Average reference sediment mortality ≤ 25 % ?: Yes
Reference toxicant LC50: 2.09 mg/liter cadmium and 163 mg/liter total ammonia. These values are within NAS' control chart warning limits.
Water quality parameter deviations: Yes. Salinities in some test chambers were up to 0.5 ppt low or 2.0 ppt high during some portion of the test and a temperature and

pH measurement was missed in one chamber on one day. These water quality deviations are considered minor and should not have significantly affected the test results.

Ammonia and sulfide concentrations < critical limits?: Yes, for both ammonia and sulfide.

QA reviewer conclusion: All data are of excellent quality and fully usable for any purpose.

2.4.3 *Neanthes* Test 725-8

1. A *Neanthes arenaceodentata* bioassay was conducted on 21 Lower Duwamish River sediment samples, plus 3 reference sediments. A negative control, and two positive (toxic) controls with cadmium and ammonia were run concurrently with the Lower Duwamish test sediments.

2. Testing was initiated within 53 days following sediment collection, which was within the 8 week limit specified in Windward Environmental's Quality Assurance Project Plan (QAPP) (Windward 2005).

3. This test was completed with two protocol deviations and three water quality deviations. The two protocol deviations were:

   I. On two test days (Day 9 and Day16), airflow was off to some beakers. Minimum measured dissolved oxygen (DO) on Day 9 was 5.2 mg/liter, which exceeded the required minimum of 4.5 mg/liter (= 60 % saturation at 20 °C and 28 ppt salinity). Day 16 DO concentrations dropped below the required minimum in 11 test beakers by as much a 1.0 mg/liter. Two of these beakers were water quality beakers, leaving 9 test beakers. Mean survival at test termination in these 9 test beakers with the transient low DO (97.8 % -- 8 beakers had complete survival and 1 beaker had 1 mortality) was similar to the average survival for all test and reference samples combined (99.0 %). Likewise, the average individual growth rate for the 9 low DO beakers (0.88 mg/day/worm) was similar to the average for all test and reference sediments combined (0.87 mg/day/worm). Thus, it is unlikely that the transient low DOs on Day 16 significantly affected the results of this test.

   II. Six polychaetes were inadvertently added to beaker #18 (replicate 1, sample LDW-SS122-010). This means that 6 worms had to compete for the available food instead of the usual 5. This could have adversely affected the growth rate in that one replicate. The growth rate in that one replicate was the lowest of the 5 sample replicates (0.70 vs. a range of 0.76 to 1.06 mg/day/worm for the other 4 replicates). Thus, it is probably reasonable to exclude that one replicate and use the remaining 4 replicates to calculate the sample averages for the growth

endpoint (inclusion of this sample for the survival endpoint should be no problem – survival was 100 %).

The three water quality deviations were:

I. DO concentrations were up to 1.0 mg/liter low on Day 16 in 11 beakers. This issue is discussed under protocol deviations (A) above.

II. Three overlying water salinity measurements on Day 18, and one on Day 20 exceeded the PSEP protocol-specified limit of 28 ± 2 ppt by 0.5 ppt. These minor salinity deviations should not have affected the test results (indeed, PSDDA allows a salinity range of 28-35 ppt).

III. Temperature on Day 3 exceeded the protocol-specified 20.0 ± 1.0 °C by 0.8 °C. This transient temperature deviation should not have significantly affected the test results.

4. The reference toxicant 50% Lethal Concentration (LC50) for the cadmium test was 8.84 mg/liter. This result was within NAS' control chart warning limits of 4.45 – 11.2 mg Cd/liter. The ammonia LC50 was 226 mg/liter total ammonia. This result was below NAS' control chart warning limits of 287 - 456 mg/liter total ammonia. However, NAS' ammonia control chart for *Neanthes* only had 7 data points; thus, variability may be somewhat greater than presently indicated. In addition, the mean control survival in the ammonia reference toxicant test was only 85 % (100 % and 70 % for the two replicates), which was less than the protocol-specified 90%. Neither the low ammonia test LC50 or the slightly low survival in the ammonia test controls are deemed significant since the test negative control performance was excellent (100 % survival and an individual growth rate of 1.11 mg/day/worm).

5. Negative control mean mortality (0 %) was <10% for this test and thus acceptable by present PSEP and PSDDA criteria. The control mean individual growth rate was 1.11 mg/day/worm, which is substantially greater than the 0.72 mg/day/worm recommended by PSDDA/PSEP. The mean mortality responses for the 3 reference sediments ranged from 0 to 4.0 %, which was within the PSDDA limit of ≤ 25 %. The mean individual growth rates for the 3 reference sediments were 98.2, 97.3 and 108 % of the negative control growth rate, which were all ≥ 80 % of the negative control growth.

6. The maximum ammonia concentration measured in the overlying water during the test in any one sample was 8.6 mg/liter total ammonia. This is below the DMMP no effects threshold concentration of 10 mg/liter and well below NAS' reference toxicant test LC50 of 183 mg/liter. Thus, ammonia concentrations were not high enough to cause significant stresses in this test.

7. No sulfides were detected in any of the test sample overlying waters (detection limit 0.02 mg/liter). Thus, sulfide levels in this test were not high enough to interfere.

8. Replication was five-fold for all samples as specified by PSDDA, except for sample LDW-SS122-010. Replicate 1 for this sample should be excluded for the growth endpoint since 6 worms were inadvertently added to this replicate.

9. Data completeness for the 21 (plus 3 control) samples tested with *Neanthes* was >99 %.

10. **Final QA determination:** All data are of good quality and fully usable for any purpose, except that replicate 1 of sample LDW-SS122-010 should be excluded for the growth endpoint (but can be used for the survival endpoint).

Table 3. Summary of *Neanthes* Test 725-8.

<u>*Neanthes arenaceodentata*, 29 April – 19 May 2005:</u>

Number of test samples, including reference sediments: 24

Sediment holding time <8 weeks?: Yes

Protocol deviations?: Yes. Some aeration was not working on Days 9 and 16, resulting in transient (but probably insignificant) low DOs in 9 test beakers (and 2 water quality beakers) on Day 16. Also, 6 worms were inadvertently added to one beaker at test initiation.

Average negative control mortality: 0 %

Average control individual growth rate ≥ 0.72 mg/day/worm?: Yes

Average reference sediment mortality ≤ 10 %?: Yes

Average reference sediment individual growth rates ≥ 80 % compared to the negative control?: Yes

Reference toxicant LC50: 8.84 mg/liter cadmium and 226 mg/liter total ammonia. The cadmium LC50 is within control chart warning limits but the ammonia response is lower than the control chart lower limit; however, the ammonia control chart only had seven data points at the time.

Water quality parameter deviations: Salinity in four beakers was 0.5 ppt above the protocol-specified range on Days 18 or 20. These minor salinity deviations should not have significantly affected the results of the test. Also, temperature exceeded the specified limit of 21 °C by 0.8 °C on Day 3. This transient temperature deviation should not have adversely affected the test results.

Ammonia and sulfide concentrations < critical limits?: Yes, for both ammonia and sulfide.

QA reviewer conclusion: All data are of good quality and fully usable for any purpose, except that replicate 1 of sample LDW-SS122-010 should be excluded for the growth endpoint (but can be used for the survival endpoint).

Northwestern Aquatic Sciences' State of Washington Accreditation Certificate and Scope of Accreditation

The State of Washington Department of Ecology

This is to certify that

Northwestern Aquatic Sciences
Newport, OR

has complied with provisions set forth in Chapter 173-50 WAC and is hereby recognized by the Department of Ecology as an ACCREDITED LABORATORY for the analytical parameters listed on the accompanying Scope of Accreditation. This certificate is effective October 1, 2004, and shall expire September 30, 2005.

Witnessed under my hand on October 7, 2004.

Perry F. Brake, Chemist
Lab Accreditation Section Manager

Lab Accreditation Number
C042

Scope of Accreditation

Northwestern Aquatic Sciences

Newport, OR

is accredited by the State of Washington Department of Ecology to perform analyses for the parameters listed below using the analytical methods indicated. This Scope of Accreditation may apply to any of the following matrix types: non-potable water, drinking water, solid and chemical materials, and air and emissions. Accreditation for all parameters is final unless indicated otherwise in a note. Accreditation is for the latest version of a method unless otherwise specified in a note. EPA refers to the U.S. Environmental Protection Agency. SM refers to American Public Health Association's publication, Standard Methods for the Examination of Water and Wastewater, 18th, 19th or 20th Edition, unless otherwise noted. ASTM stands for the American Society for Testing and Materials. PSEP stands for Puget Sound Estuary Program. Other references are detailed in the notes section.

Dinnel Marine Resources' Letter to Northwestern Aquatic Sciences Detailing Project-Specific Testing Requirements

DMR

Dinnel Marine Resources
1519 13th St.
Anacortes, WA 98221
360-299-8468

23 February 2005

Ms. Michelle Redmond
Northwestern Aquatic Sciences
PO Box 1437
Newport, OR 97365

Dear Michelle:

Thank you for providing copies of NAS' protocols for the *Eohaustorius estuarius* and *Neanthes arenaceodentata* bioassay tests to be used to assay Lower Duwamish Waterway Group sediment samples. I found the protocols to be very well written and in conformance with PSEP/SMS guidelines developed for these tests (PSEP 1995, with periodic modifications by the Dredged Material Management Program). I see no need to modify anything in your current protocols for these two test species.

As noted in both of your protocols, there are a number of variables that can change from client to client depending on their testing needs. I take this opportunity to highlight these project-specific items and encourage you to append this letter to your working protocols being used for the Duwamish Waterway testing. Project-specific testing requirements noted here are specified by the client, Windward Environmnetal LLC (Windward 2005).

For the *Eohaustorius estuarius* testing:

1. The salinity of the dilution water is specified as "...at ambient interstitial salinity for the sediment collection site for the *E. estuarius* test." Windward (2005) does not specify a salinity for this test. Thus, the question is still open as to what salinity will be used for testing. Since most amphipod bioassays use 28 ppt, I suggest that the dilution salinity for the *E. estuarius* be 28 ppt, unless the ambient salinity at the amphipod collection site is markedly different from this (see NAS protocol sections 4 and 7.5).

2. For the Duwamish testing, please note that interstitial sediment sulfide will be measured in all sediment samples at test initiation (see table in protocol section 7.7).

3. Windward has requested that the reference toxicant be cadmium chloride (see protocol section 7.10).

4. The reference sediment performance criterion for this project is "mean percent mortality in the reference sediment must be ≤25 % over the negative control (see protocol section 7.9).

5. The 8-week sediment holding time is in effect for this project. Sediment samples must be stored in the dark at 4 ± 2 °C with no headspace or headspace filled with nitrogen gas (see protocol section 2.6).

6. Any ammonia purging must be authorized by Windward (see protocol section 7.2).

For the *Neanthes arenaceodentata* testing:

1. The 8-week sediment holding time is in effect for this project. Sediment samples must be stored in the dark at 4 ± 2 °C with no headspace or headspace filled with nitrogen gas (see protocol section 2.6 and 3).

2. Any ammonia purging must be authorized by Windward (see section 7.2).

3. For the Duwamish testing, please note that interstitial sediment sulfides will be measured at test initiation (see protocol table in section 7.7).

4. Windward has requested that the reference toxicant be cadmium chloride (see section 7.10).

Please advise me if you have any concerns about these testing provisions.

I look forward to working with you and NAS on this project. As usual, I will conduct several unannounced test-in-progress audits during this project.

Sincerely,

Paul Dinnel, Project QA Monitor

CC: Helle Andersen, Windward Environmental LLC

Results of the Test-in-Progress Audits of Northwestern Aquatic Sciences' Round 2 Tests

Dinnel Marine Research

CHECKLIST FOR 10-DAY AMPHIPOD BIOASSAY

Project Name: Lower Duwamish River Round 2

Auditor: Paul Dinnel

Laboratory: Northwestern Aquatic Sciences, Newport, OR

Test Type: 10-Day Acute

Test Personnel: Michele Redmond

Test SOP: NAS-xxx-EE4

Test Date: Begin 29 April '05

Number of Samples: 21 Test, 3 Ref, 1 Control

SOP Deviations: None

Other Notes:

Shipping and Holding Conditions

Samples Received: 21 Test Samples

Samples Tested: 21 Test, 3 Ref. 1 Control

Holding Time at Test Initiation: 53 Days

Holding Conditions: 4°C in Dark

Problems Noted in Shipping and Holding: No

Testing Conditions

Protocol Used: NAS-xxx-EE4

Protocol Available?: Yes

Deviations?: No

Test Initiation Date: 29 April '05

Number of Samples: 21 Test Sediments

Multiple Batches?: No

Test Species: Eohaustorius estuarius

Animal Source: Yaquina Bay

Holding Conditions: 15°C, Constant Light

Holding Time: 2 Days

Feeding During Holding?: No

Size Selection Criteria: Those Retained on a 1 mm Screen

Other Notes:

CHECKLIST FOR 10-DAY AMPHIPOD BIOASSAY

Quality Assurance Audit

Audit date: 3 May '05

Days/Hours After Initiation: 4 DAYS

Source of Neg. Control Sediment: YAQUINA BAY

# of Reference Sediments: 3

Amount of Sediment Used: 175 ml

Final Water Volume: 950 ml

Seawater Source YAQUINA BAY

Seawater Treatment: 0.4 µm, AERATED, SAL. ADJUSTED w/ MILLI Q

Seawater Holding Time: 2 DAYS

Number of Replicates: 5 + W.Q.

Sediment Equilibration Period?: OVERNIGHT

Beakers/Amphipods Randomized?: YES

No. Amphipods/Beaker: 20

Feeding During Test?: NO

Interstitial Salinities Checked?: YES

Interstitial Salinities Adjusted?: 7 SAMPLES ADJUSTED

All Beakers Aerated?: YES

Water Temperature: 14.2 - 15.9 °C.

Water Salinity: 26.5 - 29.5 ‰

Water DO: 6.5 - 8.2 mg/l

Water pH: 7.7 - 8.2

Photoperiod: CONSTANT LIGHT

Positive Controls Used?: YES

Positive Control Toxicant: Cd & AMMONIA

Daily Test Records Maintained?: YES

Emergence Data Collected?: YES

QA Officer: LINDA NENETH

Internal QA Checks?: NOT YET

Will Reburial Test Be Conducted at End of Test?: YES

Sulfides and Ammonia Measured at Initiation and End?: YES

SOP Deviations or Problems Noted:

QA Officer: PAUL A. DINNEL Audit Date: 3 May '05

CHECKLIST FOR 20-DAY JUVENILE POLYCHAETE BIOASSAY

Project Name: Lower Duwamish River Round 2

Auditor: Paul Dinnel

Laboratory: Northwestern Aquatic Sciences, Newport, OR

Test Type: 20-Day Survival and Growth

Test Personnel: Michele Redmond, Gerald Irissarri, Bill Montgomery

Test SOP: NAS-xxx-NA4

Test Date: Begin 29 April 05

Number of Samples: 21 Test, 3 Ref + 1 Control

SOP Deviations: None

Other Notes:

Shipping and Holding Conditions

Samples Received: 21 Test Sediments

Samples Tested: 21 + 3 Ref + 1 Control

Holding Time at Test Initiation: 53 Days

Holding Conditions: 4 °C in Dark

Problems Noted in Shipping and Holding: No

Testing Conditions

Protocol Used: NAS-xxx-NA4

Protocol Available?: Yes

Deviations?: No

Test Initiation Date: 29 April 05

Number of Samples: 21 Test.

Multiple Batches?: No

Test Species: Neanthes arenaceodentata

Animal Source: Long Beach State Univ.

Holding Conditions: 20°, Full Light, Reduced Salinity to 28‰

Holding Time: 3 Days

Feeding During Holding?: Yes

Average Weight at T_0: Not Yet

Other Notes:

CHECKLIST FOR 20-DAY JUVENILE POLYCHAETE BIOASSAY

Quality Assurance Audit

Audit date: 3 MAY '05

Days/Hours After Initiation: 4 Days

Source of Neg. Control Sediment: YAQUINA BAY

# of Reference Sediments: 3

Amount of Sediment Used: 175 ml

Final Water Volume: 950 ml.

Seawater Source YAQUINA BAY

Seawater Treatment: 0.4 µm, AERATED ADJUST SALINITY W/ MILLI Q.

Seawater Holding Time: 3 Days

Number of Replicates: 5 + 1 W.Q

Sediment Equilibration Period?: OVERNIGHT

Beakers Randomized?: YES

No. Worms/Beaker: 5

Feeding During Test: TETRAMARIN, EVERY 2 DAYS

Interstitial Salinities Checked?: YES

Interstitial Salinities Adjusted?: 7 ADJUSTED

All Beakers Aerated?: YES

Water Temperature: 19.5 - 21.8 °C

Water Salinity: 26.0 - 28.5 ‰

Water DO: 5.9 - 7.3 mg/l

Water pH: ~~5.9 - 7.3~~ PAS 7.5 - 8.2

Seawater Renewal Schedule: EVERY 3 Days

Positive Controls Used?: YES

Photoperiod: CONSTANT LIGHT

Positive Control Toxicant: Cd AND AMMONIA

Daily Test Records Maintained?: YES

Internal QA Checks?: NOT SO FAR

QA Officer: LINDA NEMETH

Sulfides and Ammonia Measured at Initiation and End?: YES

SOP Deviations or Problems Noted:

A FEW TEMPERATURE READINGS WERE HIGH ON Day 3 (MAX = 21.8°C)

QA Officer: Paul A. Dinnel Audit Date: 3 MAY '05

7 June 2005

Ms. Michele Redmond
Lower Duwamish River Bioassay Project Manager
Northwestern Aquatic Sciences
PO Box 1437
Newport, OR 97365

Dear Michele:

I have finished my audits of your two Round 2 draft reports of sediment testing of Lower Duwamish River test sediments. Once again, your data reports were in excellent condition and reflect your usual high degree of attention to detail. There are only two very minor corrections needed to the reports, one in each report. My audit findings are noted below. Please provide me with copies of any corrections made to your draft data reports.

***Eohustorius estuarius* Report No. 725-7:**

Table 2, Sample LDW-SS39-010 (NAS #9901F): The standard deviation for emergence should apparently be 8.5 instead of 8.3.

***Neanthes arenaceodentata* Report No. 725-8:**

CETIS QC Chart for the ammonia reference toxicant test: The survival value for concentration 110 mg/L, replicate #1 should be 0.90000 instead of 1.00000 and the mean for that sample should be 0.95000 instead of 1.00000. This correction may result in a very slight change to the calculated LC50.

OK AS IS - NO CORRECTION REQUIRED PAD

Once again, thank you and your staff for all of your excellent work.

Sincerely,

Paul A. Dinnel
Quality Assurance Manager

CC: Helle Andersen, Windward Environmental

June 10, 2005

Dr. Paul Dinnel
Dinnel Marine Resources
1519 13th St.
Anacortes, WA 98221

Dear Paul:

Enclosed are copies of both final reports for the second round of the Lower Duwamish testing. No raw data pages were changed. Changes were as follows:

1. For report 725-7, with *Eohaustorius*, your comment was:

   > Table 2, Sample LDW-SS39-010 (NAS #9901F): The standard deviation for emergence should apparently be 8.5 instead of 8.3.

   This value, in Table 3, was changed to 8.5.

2. For report 725-8, with *Neanthes*, your comment was:

   > CETIS QC Chart for the ammonia reference toxicant test: The survival value for concentration 110 mg/L, replicate #1 should be 0.90000 instead of 1.00000 and the mean for that sample should be 0.95000 instead of 1.00000. This correction may result in a very slight change to the calculated LC50.

   No change was needed. On day 1, replicate A (#1) in 110 mg/L had one worm missing (total of 9), and replicate A in 441 mg/L had an extra worm (total of 11). We take our water quality measurements in replicate A, and drew the conclusion that one worm was probably transferred on a water quality instrument probe. Therefore we adjusted the start counts according, and the survival value for replicate #1 in 110 mg/L was 1.0.

Thank you for your thorough and thoughtful reviews of our work. I hope we will work with you on another project soon.

Sincerely,

Michele S. Redmond

3. Comments by Dinnel Marine Resources to MEC-Weston Following DMR's QA Review of the Round 2 Final Data

1.0 INTRODUCTION

MEC Analytical Systems-Weston Solutions (MEC-Weston), Tiburon, California was contracted by Windward Environmental LLC to conduct larval mussel bioassays of sediments collected from the Lower Duwamish Waterway in March 2005. MEC-Weston is a State of Washington accredited laboratory (Lab accreditation number C284, expiration: 3 September 2005) and is certified to perform larval tests using the Puget Sound Estuary Program (PSEP 1995) protocols. A copy of MEC-Weston's accreditation certificate and Scope of Accreditation appears in Appendix 1.

This report summarizes the Quality Assurance/Quality Control (QA/QC) evaluations of the second of two rounds of mussel (*Mytilus galloprovincialis*) larval development bioassays of sediments collected from the Lower Duwamish Waterway in March 2005. Testing during Round 2 was completed in one test batch, initiated on 29 April 2005. QA/QC evaluations of Round 1 tests are recorded in DMR 2005.

The QA steps taken to ensure high quality data and maximum data completeness before, during and after this round of testing are described in this report. Major QA tasks by Dinnel Marine Resources (DMR) included the following:

I. A pre-test inspection of MEC-Weston's laboratory capabilities, equipment and personnel
II. A pre-test review of MEC-Weston's Standard Operating Procedures (SOPs)
- Pre-test coordination with the MEC-Weston and Windward Environmental
- An initial evaluation of all data for completeness, correct data entries, and accurate transcription to electronic formats
- A final QA evaluation of overall data quality and usability (this report)

2.0 QUALITY ASSURANCE AUDIT RESULTS

2.1 PRE-TEST LABORATORY INSPECTION

A pre-test inspection of MEC-Weston's Tiburon bioassay laboratory, equipment, and personnel qualifications was conducted by Dr. Paul Dinnel on 28 February 2005. A summary of the inspection was recorded in checklist form (Appendix 2). MEC-Weston's bioassay laboratory, equipment, and credentials of the testing personnel all appeared to be in excellent order. No modifications to the laboratory or equipment were required.

2.2 LABORATORY PROTOCOLS AND SOPs

The PSEP protocol (PSEP 1995) for conducting larval mussel bioassays and MEC-Weston's laboratory SOP (MEC-Weston SOP BIO073.00) for this test were reviewed in detail prior to the initiation of testing. MEC-Weston's SOP was in excellent condition, and my suggestions for revisions/clarifications were minor. My comments to MEC-Weston were contained in a letter to Mr. Bill Gardiner dated 26 February 2005 (Appendix 2). Comments received from Bill Gardiner in an e-mail message dated 27 February 2005 (Appendix 2) clarified several questions about their SOP regarding randomization and use of a perforated plunger for sampling larvae. Subsequent discussion with Windward Environmental staff clarified the issue related to aeration during testing.

2.3 TEST-IN-PROGRESS AUDITS

No test-in-progress audits of the larval mussel tests were conducted due to the travel distance involved and the very short duration of the larval tests (48 hours).

2.4 INITIAL DATA EVALUATIONS

All raw data forms and electronic database files were reviewed for completeness and fidelity of transcription to electronic formats. A 100% check was made of all data entered into MEC-Weston's internal electronic database. All errors, omissions, clarifications, or changes needed to MEC-Weston's draft report were documented and communicated to MEC-Weston. A copy of the initial data evaluation report to MEC-Weston appears in Appendix 3. All needed corrections to the data report were made by MEC-Weston and subsequently verified by DMR.

PSEP (1995) water quality assurance parameters were primarily used for QA assessments of the sediment tests. Where specific values were lacking in PSEP, PSDDA (1994) values were used. These values are summarized in Table 1 for the *Mytilus* test.

2.5 FINAL QA EVALUATION OF OVERALL DATA QUALITY AND USABILITY

Following corrections to the data report by MEC-Weston personnel, a 100% check was made to verify each correction. Following this, an overall evaluation of data completeness and quality was accomplished (this report). Conclusions regarding data completeness and quality follow below (summary details for the *Mytilus* larval test are given in Table 2).

2.5.1 Chain of Custody and Sample Holding

All chain of custody protocols were properly observed in transfers of sediment samples from Windward Environmental to MEC-Weston. The test and reference sediments were stored at 4° C in a locked cold room until testing was initiated. If samples contained significant headspaces, these headspaces were purged of air with nitrogen gas prior to storage.

Table 1. PSEP (1995) and PSDDA (1994) water quality assurance parameters for the *Mytilus* larval bioassay.

Parameter	*Mytilus Test*
Temperature, °C	15-17
Salinity, ppt	27-29
Dissolved oxygen, mg/liter	60% saturation
pH	7-9
Total Ammonia, mg/liter	None
Total Sulfide, mg/liter	**None**

2.5.2 Round 2 Larval Mussel Bioassay

1. A mussel larval bioassay was conducted on 21 Lower Duwamish River sediment samples, plus 3 reference sediments. A negative (seawater only) control, and two positive (toxic) controls with copper and ammonia were run concurrently with the Lower Duwamish test sediments.

2. Testing was initiated within 53 days following sediment collection, which was within the 8 week limit specified in Windward Environmental's Quality Assurance Project Plan (QAPP) (Windward 2005).

3. This test was completed with no protocol or water quality deviations.

4. The reference toxicant 50% Effective Concentration (EC50) for the copper test was 7.0 µg/liter. This result was within MEC-Weston's control chart warning limits of 5.7 to 15.4 µg Cu/liter. The ammonia EC50 for the mussel larval test was 6.4 mg/liter total ammonia. MEC-Weston does not have enough data points as yet to establish control chart limits for ammonia for the mussel larval test.

5. Negative (seawater only) control combined mortality/abnormality (11.4 %) was <30% for this test and thus acceptable by present PSEP and PSDDA criteria. The mean combined

mortality/abnormality responses (normalized to the seawater control) for the reference sediments ranged from 24.1 to 30.3 %, which were within the PSDDA limit of ≤35 %.

6. The maximum total ammonia concentration measured in the overlying water during the test in any one sample was 0.50 mg/liter total ammonia. This is well below the EC50 of 6.4 mg/liter and below the NOEC of 2.5 mg/liter measured in the parallel ammonia positive control test. Thus, ammonia concentrations were probably not high enough to cause significant stresses in this test.

7. The maximum total sulfides concentration measured in the overlying water during the test in any one sample was 0.190 mg/liter. There currently are no PSEP or PSDDA protocol guidelines for sulfides, but an equivalent guideline for the echinoderm larval bioassay is a maximum of 0.5 mg/liter sulfides. In addition, the three sediment test samples with the highest initial overlying water sulfides (0.175 to 0.190 mg/liter) did not have unusually high mortality or abnormality responses. Thus, sulfide levels in this test probably were not high enough to interfere.

8. Replication was five-fold for all samples as specified by PSDDA.

9. Data completeness for the 24 (plus control) samples tested with mussel larvae was 100 %.

10. **Final QA determination:** All data are of excellent quality and fully usable for any purpose.

Table 2. Summary of the Round 2 mussel larval bioassay.

Mytilus galloprovincialis, 29 April – 1 May 2005:

Number of test samples, including reference sediments: 24
Sediment holding time <8 weeks?: Yes
Protocol deviations? No
Average negative control combined mortality/abnormality: 11.4 %
Average reference sediment combined mortality/abnormality ≤35% normalized to the seawater negative control?: Yes
Reference toxicant EC50: 7.0 µg/liter copper and 6.4 mg/liter total ammonia. The copper EC50 is within MEC-Weston's control chart warning limits. There are no established control chart warning limits for ammonia yet.
Water quality parameter deviations: None
Ammonia and sulfide concentrations < critical limits?: Yes for ammonia and probably for sulfides.

QA reviewer conclusion: All data are of excellent quality and fully usable for any purpose.

Scope of Accreditation

MEC - Weston Solutions Inc. N CA Bioassay Lab

Tiburon, CA

is accredited by the State of Washington Department of Ecology to perform analyses for the parameters listed below using the analytical methods indicated. This Scope of Accreditation may apply to any of the following matrix types: non-potable water, drinking water, solid and chemical materials, and air and emissions. Accreditation for all parameters is final unless indicated otherwise in a note. Accreditation is for the latest version of a method unless otherwise specified in a note. EPA refers to the U.S. Environmental Protection Agency. SM refers to American Public Health Association's publication, Standard Methods for the Examination of Water and Wastewater, 18th, 19th or 20th Edition, unless otherwise noted. ASTM stands for the American Society for Testing and Materials. PSEP stands for Puget Sound Estuary Program. Other references are detailed in the notes section.

Pre-Test Laboratory Inspection Checklist and Communications Related to Pre-Test Refinements of MEC-Weston's Standard Operating Procedures

ON-SITE LABORATORY EVALUATION FORMS AND CHECKLISTS

The laboratory must have an informal meeting to introduce the technical staff and other personnel of the toxicity test program to the evaluator. The laboratory must present and discuss aspects of the laboratory QA and toxicity test program. The evaluator must explain the audit or evaluation process if it is not clear to the laboratory.

The completed pre-survey forms (Appendix E) should be used by the evaluator as supplemental on-site checklists with Appendix F.

The following items are covered in this appendix:

I. On-Site informal Laboratory Presentation

II. Organization History

III. Laboratory Staff

IV. Facilities and General Equipment

V. Test Equipment, Instruments, and Supplies

VI. Test Organisms

VII. Documentation

VIII. Toxicity Test Methodology

IX. Quality Assurance and Quality Control

X. Data Handling

XI. Summary

APPENDIX F

INFORMAL LABORATORY MEETING AND INTRODUCTION
OF THE TECHNICAL STAFF

I. Organizational Information

Facility Description: MEC - Weston Solutions Tiburon Laboratory

Name/Affiliation:

Address: 3150 Paradise Dr., Bldg 36

Tiburon, CA 94920

Phone Number: 415-435-1847

Laboratory Director/Manager: Scott Bodensteiner

Type of Evaluation: Larval Bioassay Pre-test Audit

Informal meeting and introduction of laboratory staff: Y X N ___

Laboratory Personnel Contacted

Name	Title
William Gardiner	Senior Scientist
Matt Zinkl	Lab Manager

ON-SITE LABORATORY FORMS AND CHECKLISTS

Note: The completed pre-survey forms (Appendix E) should be used by the audit or evaluator to supplement the on-site forms and checklists.

II. Organization History

Item	Yes	No	Comments
Laboratory On-Site Introduction/ Meeting with staff	X		
Laboratory demonstrates active toxicity test program	X		
Performance reference toxicant data available and checked	X		
Organization chart provided	X	X	PAS

III. Laboratory Staff

Item	Yes	No	Comments
Pre-survey forms verification	X		
Appropriate educational background experience/toxicity testing	X		
Laboratory adequately staffed	X		
All technical staff available during evaluation	X		FOR LARVAL TEST
QA officer report to senior management	X		LIN CRAFT, CARLSBAD OFFICE
Director/Supervisor/ Manager available during evaluation		X	
QA officer available during evaluation		X	

IV. Facilities and General Equipment

Item	Yes	No	Comments
Pre-survey forms verification			
Tour lab	X		

IV. Facilities and General Equipment (Continued)

Item	Yes	No	Comments
Tour mobile lab, if available		X	NONE USED
Lab work space adequate	X		
Culture space adequate	X		
Toxicity Test space adequate	X		
Lab has distilled/ demineralized water.	X		
Lab has distilled demineralized water checked/recorded.	X		
Analytical balance/ calibrated yearly	X		
Balance routinely checked/ class S weights/recorded logbook	X		
Exhaust hoods provided	X		
Refrigerator/freezer adequate, etc.	X		
Lab maintained in clean/ organized manner	X		
Contamination-free work areas available for handling test materials	X		
Culture and test areas separated	X		PARTIALLY
Adequate storage areas available	X		
Temperature of lab adequate	X		
Lighting adequate	X		
Air condition/ventilation adequate	X		
Chemical waste disposal policies/ SOPs available	X		
Lab secure	X		

V. Test Equipment, Instruments, and Supplies

Item	Yes	No	Comments
Pre-survey forms verification	X		

V. Test Equipment, Instruments, and Supplies (Continued)

Item	Yes	No	Comments
SOP(s) verification	X		
Calibration checks/log books pre-survey forms	X		
Manual available to operator	X		

VI. Test Organisms

Item	Yes	No	Comments
Pre-survey forms verification	X		
Culture Maintenance SOP(s) available		X	NOT NEEDED, MUSSELS ORDERED AS NEEDED
Disease control/treatment protocols documented		X	NA
Holding/acclimation facilities adequate	X		
Source of test organisms documented	X		
Food and feeding program documented		X	NA
Freshwater supply/source/quantity used/quality documented			NA
Estuarine/marine water supply/ source/quantity used/quality/ documented	X		AVAIL. ON REQUEST

VII. Documentation

Item	Yes	No	Comments
Pre-survey forms verification	X		

VII. Documentation (Continued)

Item	Yes	No	Comments
Sample custodian designated	X		
Sample procedures/ responsibilities documented	X		
Written SOPs available for receipt of samples			
QA procedures documented/ available to staff	X		
Written SOPs developed for compiling/maintaining sample document files	X		
Written SOPs for samples preservation, storage/ are maintained.	X		
Written SOPs for culture/ test methods	X		
Daily activities/toxicity test documented	X		
Bound logbooks available/ general chemistry (pH,DO,etc.)	X		
Bound logbooks used, pages numbered consecutively		X	
Type of work clearly displayed on logbooks	X		
Logbooks maintained in legible manner	X		
Are anomalies recorded routinely			
Are inserts permanently affixed and signed.			
Supervisor inspects notebooks/ for appropriate documentation	X		

VIII. Toxicity Test Methodology (Recommended Toxicity Test Conditions and Test Acceptability Criteria: On-Site Checklists, see Appendix G.)

Item	Yes	No	Comments
Pre-survey forms verification	X		
Required methods used	X		
Any unauthorized deviations	X		
Are written SOPs provided	X		

VIII. Toxicity Test Methodology (Recommended Toxicity Test Conditions and Test Acceptability Criteria: On-Site Checklists, see Appendix G.) (Continued)

Item	Yes	No	Comments
Biologist/technician record bench data in neat accurate manner	X		
Appropriate instrumentation used with each toxicity test	X		

IX. Quality Assurance/Quality Control (QA/QC)

Item	Yes	No	Comments
Pre-survey forms verification	X		
Lab maintains QA/QC manual	X		
Manual addresses elements of QA program, including the following:			
a. Personnel	X		
b. Facilities and equipment	X		
c. Operation of instruments	X		
d. Documentation of SOPs	X		
e. Procurement and inventory practices			NA
f. Project plans/ Data quality objectives	X		PROJECT SPECIFIC PLANS
g. Reliability of data	X		
h. Data validation	X		
i. Feedback and corrective action	X		
j. Instrument calibration	X		

IX. Quality Assurance and Quality Control (Continued)

Item	Yes	No	Comments
k. Recordkeeping	X		
l. Internal QA/QC audits	X		
m. QC responsibilities/ reporting clearly defined	X		
n. QC charts maintained for routine analysis	X		
o. QC records show corrective action to meet QC criteria	X		
p. Supervisory personnel review data and QC results	X		
Chain-of-custody maintained	X		
Record keeping adequate	X		
Instrument Calibration/ logbooks maintained	X		
Reference toxicant evaluations used	X		
Analytical support/ inorganic analyses	X		
Analytical support/ organic analyses	X		

X. Data Handling

Item	Yes	No	Comments
Recommended statistical programs used	X		
Data calculations check/ second person	X		
Data calculations documented	X		
Data analyses capabilities available	X		
Data and records retained	X		
PC computer(s) available	X

26 February 2005

Mr. Bill Gardiner
MEC-Weston Solutions
3150 Paradise Drive, Bldg. 36
Tiburon, CA 94920

Dear Bill:

Thank you for providing copies of MEC-Weston Solutions' protocol for the Mussel embryo bioassay tests to be used to assay Lower Duwamish Waterway Group sediment samples. I found your protocol to be well written and generally in conformance with PSEP/SMS guidelines developed for these tests (PSEP [or PSWQA] 1995, with periodic modifications by the Dredged Material Management Program). There are a few potential minor protocol refinements that I will discuss with you and your staff on my site visit on the morning of 28 February, 2005. Several of these items are noted here:

1. No provision is given in MEC's protocol for randomization. The PSEP (1995) guidelines state that "A random numbering method should be used to distribute the chambers in the water bath (or incubator or cold room)."

2. No mention is made in your protocol about use of a perforated plunger to mix embryos/larvae at test initiation or termination. Use of a perforated plunger is required by the PSEP guidelines to ensure proper mixing during subsampling.

As noted in your protocol, there are a number of variables that can change from client to client depending on their testing needs. I take this opportunity to highlight these project-specific items and encourage you to append this letter to your working mussel embryo protocol being used for the Duwamish Waterway testing. Project-specific testing requirements noted here are specified by the client, Windward Environmnetal LLC (Windward 2005).

1. "The mean effective mortality (combined mortality and abnormal development) in the negative control should be ≤ 30 % (Windward 2005, pg. 71). In other words, normal development in the negative control must be ≥ 70 % relative to the average embryo density of the Time zero counts.

2. At this time, Windward Environmental requests that "all beakers will be aerated to maintain correct levels of (DO) saturation throughout the tests" (Windward 2005, pg. 69). Normally, the PSEP (1995) mussel embryo development test protocol calls for aeration only if DO levels in one or more test/control beakers falls below 60% saturation. This aeration requirement needs to be verified with Windward prior to test initiation.

3. For the Duwamish testing, please note the following Windward requirements for water quality monitoring: "Temperature, salinity, DO and pH will be measured daily for the amphipod mortality and larval development tests." Additionally, "Ammonia and total sulfides will be measured in overlying water in all three tests at test initiation." (Windward 2005, pg. 73).

4. Windward Environmental (2005, pg. 72) indicates that "For the bivalve test, the negative control seawater will be either ambient seawater from San Francisco Bay flowing into the MEC laboratory or seawater collected from Bodega Bay." At the moment, your protocol specifies collection from Scripps Institution of Oceanography (La Jolla).

5. Windward has requested that the reference toxicant be copper sulfate, which, per your protocol, is your normal reference toxicant for this test.

6. The reference sediment performance criterion for this project is "Mean number of normal developed larvae in the reference sediments divided by the mean number of normal developed larvae in the negative control should be ≥ 65 %." (Windward 2005, pg. 71).

7. The 8-week sediment holding time is in effect for this project. Sediment samples must be stored in the dark at 4 ± 2 °C with no headspace or headspace filled with nitrogen gas (Windward 2005, pg. 68).

8. "The EC50 for a positive control test (copper sulfate) should be within the mean EC50 ± 2 standard deviations of the control chart" mean for the mussel embryo development test (Windward 2005, pg. 71).

9. Also, please note that Windward requires that "Toxicity test samples will be retested within the (8-week) holding time if the negative control fails to meet the performance criteria." (Windward 2005, pg. 71).

Please advise me if you have any concerns about these testing provisions.

I look forward to working with you and MEC-Weston Solutions on this project. Please be sure to provide me with periodic updates as may be necessary and advise me of any protocol deviations or negative control, positive control or reference sediment QA failures.

Sincerely,

Paul Dinnel, Project QA Monitor

Subj: **RE: Comments on Mussel Embryo protocol**
Date: 02/27/2005 1:01:03 PM Pacific Standard Time
From: Bill.Gardiner@WestonSolutions.com
To: PADinnel@aol.com

Paul,

thanks for your comments. Yes we do use a perforated plunger for mixing the larval stock and yes we randomize jar positions. You will be able to see the randomization sheets tomorrow.

I agree we should check with Windward about aeration. We normally do not aerate unless DO drops to unacceptable levels, as PSEP requires. My guess is that Windward does not intend to have this deviation in the protocol.

See you tomorrow - have a safe flight.

Bill

Appendix 3

Comments by Dinnel Marine Resources to MEC-Weston Following DMR's QA Review of the Round 2 Final Data

DMR

Dinnel Marine Resources
1519 13th St.
Anacortes, WA 98221
360-299-8468

30 May 2005

Mr. Bill Gardiner
MEC-Weston Solutions
3150 Paradise Drive, Bldg. 36
Tiburon, CA 94920

Dear Bill:

Thank you for sending a copy of your Round 2 draft report and raw data for the Lower Duwamish River sediment tests using mussel embryos. I have finished my QA audit of your Round 2 data report and found it to be in excellent shape, with the exception of a few items that need to be corrected in the final draft. Many of these items are simply "housekeeping" but a few will require recalculation of some of the test endpoint statistics.

The apparent corrections needed to the final draft report are:

1. Title on cover: Change "Phase II" to "Round II".

2. Last three sentences of the **Introduction** should read: This represents the second round of sediments evaluated from the Lower Duwamish River. Sediment evaluations for the first round of samples included two batches of larval tests, Batch 1 and Batch 2. This report provides an overview of the methods followed during this evaluation and presents the results for Round 2 larval tests.

3. PSEP 1995 and Windward 2004 are cited in the first paragraph of the Methods. References to these citations should be added to the report.

4. The second and third sentences under "***48-hour Larval Bioassay***" should read: The 48-h larval test was conducted in one batch initiated on April 29 2005. Both negative controls and reference treatments were evaluated with this toxicity test batch.

5. Last line of the first full paragraph on page 3 should read: 23.8 embryos/mL, ...

6. Line just above "***Data Analysis and QA/QC***": Change "round" to "batch".

7. Under "***Data Analysis and QA/QC***" (Page 4): Change T to T_t in two of your formulas.

8. Under "**3.0 Results**", in the first sentence, change "Round 3" to "Round 2" and "Tables 1" to "Table 1". At the beginning of the second paragraph, change "Round 1" to "Round 2" in two places.

9. Table 1: Change "Round 3" to "Round 2" in the table header. Note that some of the table values for samples LDW 68, LDW 158, LDW B2b and LDW B6a will likely need to be changed (see item #12 below).

10. Table 2: Change "Round 3" to "Round 2" in the table header.

11. Table 3. Ditto.

12. Appendix A1: Ditto. Also, there appear to the following errors in Appendix A1:

    Sample LDW 68, Rep. 1: The normal value should be 218 instead of 195. The sample mean values will need to be recalculated and also changed in Table 1.

    There are apparent errors in the Excel spreadsheet formulas for calculating the mean statistics for samples LDW 158, -B2b and –B6a (the last three samples). The mean percentage mortality and mean percentage abnormal (and SDs) for sample LDW 158 appear to be ok, but all other calculations appear to be wrong. If found to be wrong, the samples will need to be recalculated and the values in Table 1 corrected.

13. Appendix B1: Change "Round 3" to "Round 2" in the table header.

14: All raw data sheets: Change "Round 3" to "Round 2" where needed. Ditto on Ref Tox. Test sheets.

Thank you for addressing these comments. Please forward any corrections to the Round 2 data report so that I may verify the changes (or comments as to why they should not be changed).

Sincerely,

Paul Dinnel, Project QA Monitor
