## Case Narrative

**Client:** Anchor QEA, LLC  
**Project:** AOC5 MR Phase 1  
**Work Order:** 23A0179

*Revised 06/01/2023 to include a reanalysis of sample LDW23-SS1112 for aroclors.*

### Sample receipt

Samples as listed on the preceding page were received 10-Jan-2023 17:10 under ARI work order 23A0179. For details regarding sample receipt, please refer to the Cooler Receipt Form. Samples were frozen on receipt to preserve holding times.

Per client request, sample LDW23-SS1112 was re-extracted to attempt to report at a lesser dilution than provided in the original report.

### Semivolatiles - EPA Method SW8270E

The sample(s) were extracted and analyzed within the recommended holding times for samples stored frozen. The initial extraction batch BLA0557 did not pass QC requirements and were approaching the 40-day holding time, and the samples were reextracted in batch BLC0442.

Initial and continuing calibrations were within method requirements, with accepted excursions outside the 20% window. Associated positive results have been "Q"-flagged.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The batch BLC0442 method blank(s) were clean at the reporting limits and was rerun as part of instrument QC to start a sequence.

The batch BLC0442 blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits

The batch BLC0442 matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and relative percent difference (RPD) were within advisory control limits.

The reference material (SRM) percent recoveries were within control limits.

## Case Narrative

The batch BLC0442 blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The batch BLC0442 matrix spike (MS) percent recovery for pentachlorophenol was high of advisory control limits. The relative percent difference (RPD) for 2,4-dimethylphenol was high of advisory control limits and flagged on the summary sheet.

The reference material (SRM) percent recoveries were within control limits.

### Pesticides - EPA Method SW8081B (Hexachlorobenzene)

The sample(s) were extracted and analyzed within the recommended holding times for samples stored frozen.

Initial and continuing calibrations were within method requirements. A PEM was not run to open the sequence. As the only target is hexachlorobenzene, no corrective action was required.

Internal standard areas were within limits.

The surrogate percent recoveries for decachlorobiphenyl were flagged NRS in sample LDW23-SC 1112 due to interference from the matrix.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and relative percent difference (RPD) were within advisory control limits.

### PCB Aroclors - EPA Method SW8082A

The sample(s) were extracted and analyzed within the recommended holding times for samples stored frozen.

Calibrations SLB0084-CCV5 and SLB0084-CCV7 were outside limits high on the ZB5 column, attributed to continual issues with the matrix affecting instrument performance. All results are reported from the ZB35 column as primary.

Tetrachloro-m-xylene (TCMX) was high of limits on both columns for SLB0084-CCV3. As TCMX is used only for evaluation of blow down efficiency and not required by the method, no corrective action was taken.

The internal standard hexabromobiphenyl (HBB) failed low on the ZB5 column for a number of samples, attributed to the sample matrix. Data is reported from the ZB35 column as primary.

The surrogate percent recoveries were within control limits.

The method blank(s) were clean at the reporting limits.

The blank spike and blank spike duplicate (BS/LCS and BSD/LCSD) spike recoveries and relative percent difference (RPD) were within control limits.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and relative percent difference (RPD) were within advisory control limits.

The reference material (SRM) percent recoveries were within control limits.

Sample LDW23-SS1171 was diluted 1x5000 to bring response into the calibrated range of the instrument.

## Case Narrative

Sample LDW23-SS1112 was diluted 1x100 due to the color and characteristics of the matrix. The sample was ND for aroclors at a high level, but due to the chromatography and response of the extract at 1x100, no runs were made at a lower dilution to avoid further damage to the analytical column.

The analyst noted carry-over from sample LDW23-SS1171, so a methylene chloride rinse was run after the sample to avoid carry-over issues with subsequent sample analyses.

The analyst noted identification of aroclors were made using the best possible fit, as there were miscellaneous interfering peaks throughout the runs.

Per client request, sample LDW23-SS1112 was reextracted from frozen volume in batch BLD0737 and analyzed without dilution. The associated QC was within control limits. The analyst noted low recovery of the internal standard hexabromobiphenyl in the BLD0737-MS and -MSD on the ZB5 column, and the sample appears to have high sulfur content interfering with recoveries. The baseline was raised to account for the sulfur peak, and the analyst noted again going with the best fit due to miscellaneous interfering peaks.

### **Total Metals - EPA Method 6020B**

The sample(s) were digested and analyzed within the recommended holding times for samples stored frozen.

Calibration SLD0127-CCV3 showed indium to be slightly noisy, SLD0127-CCB7 showed scandium and terbium slightly noisy. SLD0127-IFA and SLD0127-IFB1 showed chromium-35 high.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries for silver were low of advisory control limits. The relative percent differences (RPD) were within advisory control limits.

The duplicate (DUP) relative percent difference (RPD) was high of advisory control limits for lead.

The post spike had acceptable recovery for all elements.

### **Total Mercury - EPA Method 7471B**

The sample(s) were digested and analyzed within the recommended holding times for samples stored frozen.

Initial and continuing calibrations were within method requirements.

The method blank(s) were clean at the reporting limits.

The blank spike (BS/LCS) percent recoveries were within control limits.

The duplicate (DUP) relative percent difference (RPD) were within advisory control limits.

The matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and relative percent difference (RPD) were within advisory control limits.

### **Wet Chemistry (Total Organic Carbon and Total Solids)**

The sample(s) were prepared and analyzed within the recommended holding times for samples stored frozen.

(V) indicates a virtual standard combining two or more physical standards. In these cases the Standard ID refers to the virtual standard, not the parent standards.

If a Standard ID is missing, but should be present, check the standard definition in Element LIMS to be sure Standard Info 6 has the correct letter or number designator matching the vial designator in the Standard ID column. If it is correct, check the batch and bench sheet in Element LIMS to be sure the correct standards are selected for surrogate(s) and spike(s).

**Prep Instructions**

**SPECIAL INSTRUCTIONS:**

1. Weigh into beakers—lightly dry with Sodium Sulfate.
2. Transfer to microwave vessel.
3. Add DCM ONLY to the vessels (until solvent is 3 inches above soil layer after homogenization).
4. Add surr/spike.
5. Microwave on appropriate power setting determined by # of samples.
6. After microwave-re-homogenize while hot then let cool 10-15 min in Refridgerator 05. Re-homogenize while cool.
7. Decant DCM into Erlenmeyer flask with a funnel containing pre-deactivated glasswool.
8. Rinse with DCM
9. Microwave a 2nd time using 1:1 DCM/ACE.
10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM.
11. KD: Add 10 mL Hexane directly to extract in the KD.
12. GPC REQUIRED 100°C water bath (CLP) KD to 5mL.
13. Vialers to take 1:5 Split Pre- GPC.
14. (After GPC): KD at 80°C.
15. TurboVap to 1mL in DCM.
16. WATER WASH REQUIRED:
  - 16a. Vial 1mL of all extracts in 2mL amber vials in DCM.
  - 16b. Add ~0.5mL DI water and vortex for ~5 seconds each.
  - 16c. Centrifuge extracts for 5 minutes at 1500-2000rpm.
  - 16d. Transfer and vial 0.5mL to new 2mL amber vials (Avoiding collecting water in syringe and cleaning syringe with Acetone and DCM between each vial).
17. Archive water wahed vials and deliever new vials to GC Department for analysis.
