Cleanup Construction Activities

The construction schedule is transitioning from 7 a.m. to 7 p.m. Monday through Friday and 9 a.m. to 7 p.m. on Saturdays to follow the times for high tides. The active work sites are in shallow waters near the shore and higher tides are needed to float the equipment. **The high tides during the week of January 27 require work in the early mornings Monday through Saturday. The work schedule will vary but may start as early as 4 a.m.** This work includes movement of barges.

For questions or concerns, you can reach our team at info@ldwg.org or 1-888-561-LDWG (1-888-561-5394). Please note that in-water construction activities are tide and weather-dependent. All schedules are subject to change.

Weekly Environmental and Community Report for the week of January 13

You may view the weekly report and other previous weekly reports by clicking the link below.

What to expect during the week of January 27

Cleanup activities will occur in Sediment Management Areas (SMAs) 2, 3, 4, 6, 8, 11B, and C1. See the map of cleanup areas linked below.

The Contractor will continue backfilling in SMAs 2, 3, and 4. Dredging of contaminated material has been completed and dredged sediment is being replaced with clean material. The Contractor may be dredging or backfilling in SMA 6, depending on the results of testing samples collected earlier in January. The Contractor will place clean material in SMAs 8, 11B, and C1 where Enhanced Natural Recovery is the cleanup method. Enhanced Natural Recovery uses a thin layer of sand to speed up the natural recovery process.

What to expect during the week of February 3

During the week of February 3, cleanup activities will continue in SMA 6.

Remember, the only Duwamish River seafood that is safe to eat is salmon. In the Duwamish River, the seafood that spend their entire lives in the river (perch, sole, flounder, crab, mussels, and clams) are unsafe to eat. They have high levels of toxic chemicals (such as PCBs) that you cannot see.

Learn how to protect your health while fishing for seafood that is safe to catch and eat.
